

31/3/76

EARTHFLAWS IN THE YANKALILLA DISTRICT
OF SOUTH AUSTRALIA.

Wilhelmus J. Van Deur

Department of Geography, University
of Adelaide.

Field study submitted in partial fulfilment
of the requirements for the Degree of
Bachelor of Arts, with Honours in Geography.

Adelaide 1975.

ACKNOWLEDGEMENTS.

I extend my thanks to Dr. F. Gale as head of the department for the use of facilities and to members who assisted me in such use.

To Dr. K. Norrish and the staff of The Division of soils, C.S.I.R.O. I express my gratitude for their advice and analysis of soil samples.

Dr. Arnold and members of the Department of Civil Engineering, University of Adelaide, gave me valuable instruction and assistance in the analysis of the physical properties of soils and thus to them I offer my appreciation.

To the field assistants who have aided me in the more labourious aspects of this study, I am indebted, for many parts of the study would have proved impossible to undertake on my own.

Finally, I should like to express my thanks to Dr. C.R. Twidale, my supervisor, not only for the encouragement and assistance he has provided throughout the course of the investigation, but for the enthusiasm he has engendered in me for the field of geomorphology.

LIST OF FIGURES.

| | | <u>BETWEEN</u> | <u>PAGES.</u> |
|-------------|---|----------------|---------------|
| Fig. one.. | Location map of the study area | 001 | III-1 |
| Fig. two. | Diagram to show main features of earthflow. | | 2-3 |
| Fig. three. | Geological map of the Fleurieu Peninsula. | | 4-5 |
| Fig. four. | Location map of earthflows in study area. | | 8-9 |
| Fig. five. | Contour map of earthflow four. | | 13-14 |
| Fig. six. | Composite soil profile diagram. | | 20-21 |

LIST OF TABLES.

| | | <u>PAGE.</u> |
|--------------|--|--------------|
| Table one. | Classification, dating, activity and aspect. | 34-36 |
| Table two. | Results of bore holes. | 37 |
| Table three. | X-ray diffraction analysis of bore hole samples | 38 |
| Table four. | Plastic and liquid limits. | 38 |
| Table five. | Rates of movement, earthflow eight. | 38 |

LIST OF PLATES.

PAGE.

| | | |
|--------------|--|-------|
| Plate one. | Mass-movement of the 'earthflow' type displaying single flow. | 3-4 |
| Plate two. | Earthflows of the coalesced type. | 3-4 |
| Plate three. | Highly active earthflow (number eight) with incipient tension crack and bulge. | 21-22 |
| Plate four. | Earthflow four. | 21-22 |
| Plate five. | Scarp displaying partial cementing. | 23-24 |
| Plate six. | Angular debris in clay matrix. | 23-24 |
| Plate seven. | Water trap formed between scarp and subsided surface. | 29-30 |
| Plate eight. | Comparison of uncleared, native vegetation in background, with cleared land in the foreground. | 29-30 |
| Plate nine. | A dormant earthflow, apparently stabilized by vegetation. | 30-31 |
