

Effect of Platelet-Derived Growth Factor-BB on bone formation around dental implants: an experimental study in sheep

**A report submitted to the University of Adelaide in partial
fulfilment of the requirements of the Degree of Doctor of Clinical
Dentistry (Periodontology)**

Tina Choo BDSc (WA)

| Chapter 1. Literature review on outcomes of immediate implants and materials or techniques used for bone augmentation around immediate implants | 1 |
| 1.1 Introduction | 1 |
| 1.2 Dimensional alveolar ridge alteration following tooth extraction..... | 1 |
| 1.3 What are the aesthetic outcomes of immediate implants?..... | 2 |
| 1.4 Can immediate implants prevent alterations in the dimension of the alveolar ridge after tooth extraction? | 4 |
| 1.5 Can bone grafting around immediate implants compensate for crestal bone resorption following tooth loss? | 5 |
| 1.6 When should bone augmentation be performed around immediate implants? | 5 |
| 1.7 What grafting materials or techniques are available for bone augmentation and are they effective at promoting new bone formation around immediate implants?..... | 7 |
| 1.7.1 Guided bone regeneration (GBR) | 7 |
| 1.7.2 Autogenous bone grafts | 8 |
| 1.7.3 Allografts | 11 |
| 1.7.4 Xenografts..... | 12 |
| 1.7.5 Alloplasts | 14 |
| 1.7.5.1 Combination of β -TCP with growth factors | 15 |
| 1.8 Molecular agents and growth factors with potential to enhance bone regeneration | 16 |
| 1.8.1 Bone morphogenetic proteins (BMPs) | 16 |
| 1.8.2 Platelet-rich plasma (PRP)..... | 18 |
| 1.8.3 Enamel Matrix Derivative (EMD)..... | 20 |
| 1.8.4 Peptide P-15 | 20 |
| 1.8.5 Recombinant human growth differentiation factor-5 (rhGDF-5) | 21 |
| 1.8.6 Fibroblast growth factor (FGF)..... | 22 |
| 1.8.7 Transforming growth factor-beta (TGF- β) | 23 |
| 1.8.8 Insulin-like growth factor (IGF) | 24 |
| 1.8.9 Platelet-derived growth factor (PDGF)..... | 25 |
| 1.8.9.1 Effect of PDGF on bone healing in peri-implant bone defects..... | 26 |
| 1.8.9.2 Potential of using PDGF-BB with different carrier types on bone regeneration | 27 |

| | |
|---|----|
| 1.9 Conclusions | 28 |
| 1.10 Hypothesis | 30 |
| 1.11 Aim of the study | 30 |
| 1.12 References | 31 |
| Chapter 2. Effect of PDGF-BB on bone formation around dental implants: an experimental study in sheep | 53 |
| 2.1 Abstract..... | 53 |
| 2.2 Introduction | 54 |
| 2.3 Materials and Methods | 56 |
| 2.3.1 Animal model and study design..... | 56 |
| 2.3.2 Surgical procedure | 56 |
| 2.3.3 Postoperative management | 59 |
| 2.3.4 Retrieval surgery and histological preparation | 59 |
| 2.3.5 Histological examination | 60 |
| 2.3.6 Statistical analysis..... | 60 |
| 2.4 Results | 60 |
| 2.4.1 Surgery and postoperative period | 60 |
| 2.4.2 Histological Analysis: qualitative..... | 61 |
| 2.4.2.1 Two-week healing period (Figure 4a-c)..... | 61 |
| 2.4.2.2 Four-week healing period (Figure 4d-f)..... | 61 |
| 2.4.3 Histomorphometric analysis: quantitative | 65 |
| 2.5 Discussion..... | 68 |
| 2.6 Conclusion..... | 72 |
| 2.7 References | 73 |

Declaration

I, Tina Choo Sheng Lynn, declare that this work to the best of my knowledge and belief contains no material previously published or written by another person, except where due reference has been made in the text. It contains no material which has been accepted for the award of any other degree of diploma in any university or tertiary institution.

I give consent to this copy of my thesis to be made available to the University Library, for loan or photocopying, subject to the provisions of the Copyright Act 1968, as well for the digital version of my thesis to be made available on the web, via the University's digital research repository, the Library catalogue, the Australasian Digital Theses Program (ADTP) and also through web search engines, unless permission has been granted by the University to restrict access for a period of time.

Acknowledgements

This research was supported by a grant from the Australian Dental Research Foundation Inc. (ADRF). The provision of the implant hardware was kindly donated by Nobel Biocare AB, Sweden. A big thank you to Professor Mark Bartold for his invaluable advice and positive encouragement throughout my Doctor of Clinical Dentistry degree. It has been a really wonderful and privileged experience.

I would also like to acknowledge Victor Marino for his ingenuity and impressive efforts with this research, as well as providing great support and guidance throughout. A big thank you to Dr Tim Kuchel, Head of Veterinary Services Division, Institute of Medical and Veterinary Sciences, for his expertise and assistance with the surgery; the Animal House staff for the care of the animals; the Bone and Joint Research Laboratory, IMVS, for providing the materials and equipment to enable me to process my specimens, with special thanks to Lena Truong, for her kindness, patience and guidance with the preparation and sectioning of the bone specimens, and Ian Parkinson, for his expert assistance with all queries in regards to the use of the microscope and analysis software. I am also grateful to Thomas Sullivan, Data Management and Analysis Centre, Discipline of Public Health, The University of Adelaide, for his assistance with the statistical analysis.

Lastly, I would like to thank my husband Adrian Sue for his extreme patience and support during the last three years and for always having belief in me; Dr. Bryon Kardachi for giving me such helpful advice; Ms Catherine Offler for always being such fantastic help since day 1 of the program as well as for her assistance in the final editing of this thesis; and my dear colleagues and friends for their continuous support throughout the years.
