

# GEOLOGY EAST OF ANGASTON

## FACT MAP

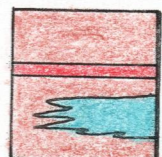

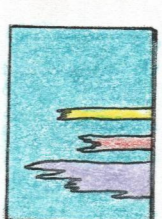

### LEGEND

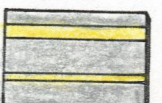

#### TERTIARY-RECENT

-  Kunkur & silicified zone related to bedrock.
-  White clays of pallid zone; ferruginous capping.

#### ROCK UNIT 2

- B**  Silty, sandy laminated schists with andalusite & staurolite. Interbeds of quartzite & lenses of marble.
- A**  Marbles, scapolite marbles, amphibolite marbles interbedded or interfingering with: quartzites, calcareous quartzite, micaceous schist, thinly interbedded marbles & calc-silicates.

#### ROCK UNIT 1

- C**  Scapolite spotted, grey, silty or sandy schists. Calcareous horizons. Interbeds of quartzite & arkose. Quartzite near top.
- B**  Dark grey, silty schists & siltstones; finely laminated. Calcareous, pyritic, carbonaceous in part.
- A**  Scapolite spotted, grey, silty or sandy schists. Calcareous horizons. Interbeds of quartzite.

#### INTRUSIVE ROCKS

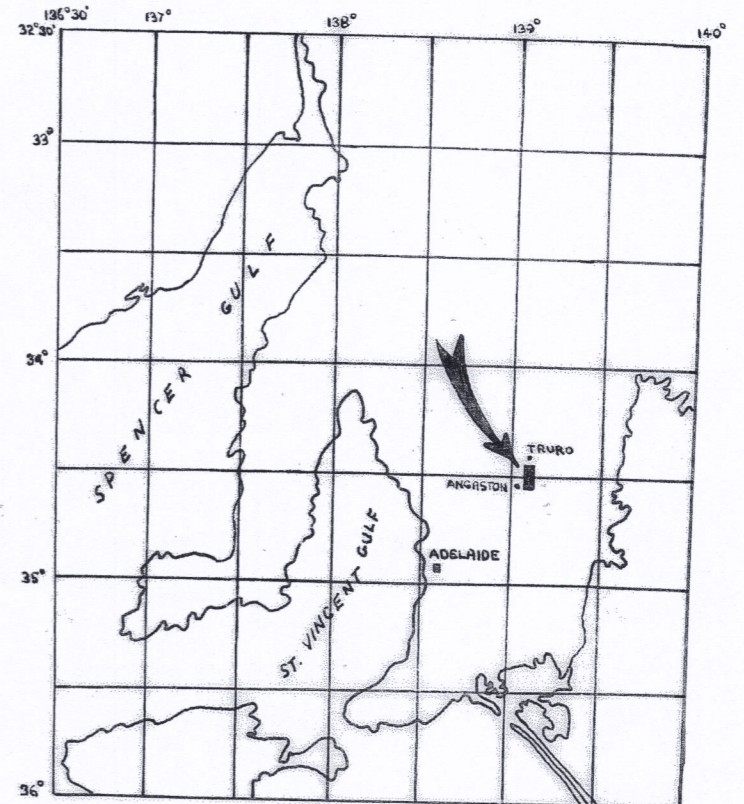

-  Metadolerites.
-  Gossan.
-  Quartz.

-  Limit of outcrop.
-  'Floor' related to bedrock.
-  Creek outcrop.
-  Bedding.
-  Foliation.
-  Sedimentary facing (current bedding).
-  Crush zone.
