Field Report

THIRD - FOURTH CREEKS AREA

MORIALTA

by

I.R. Pontifex, B.Sc.

University of Adelaide
Department of Economic Geology
December, 1961.

ABSTRACT

This report describes the stratigraphic sequence and the structural geology of the area. The stratigraphic sub-divisions have been discussed in detail and ^{also} many features defining deformation within the units. Often phenomena pertaining to points largely of academic interest have been mentioned. Although not always significant in determining the regional geology, these have been included to provide a possible basis for future detailed work in this area.

Sub-unit 9	
Undifferentiated Phyllites and Slates	10
<u>V</u> ENVIRONMENT OF DEPOSITION	10

VI STRUCTURAL GEOLOGY 11.

General

(A) Description of Field Observations 12.

(a) Bedding Planes

(b) Foliation

(c) Cleavage

1. Flow Cleavage

2. Strain Slip Cleavage

(d) Lineations 14

(e) ~~Overtained~~ Minor folding 16

1. Overtained minor folding

2. Drag Folding

(f) Jointing 17

II Microscopic Observations 17

(a) Textural Relationships of Grains

(b) "Pressure shadow" development

III Structural Interpretation 19

(a) Phase 1. 19

(b) Phase 2. 21

1. Overtained minor folding

2. Overthrust faulting

3. Lineations

VII ECONOMIC GEOLOGY 25

VIII SUMMARY AND CONCLUSIONS 25
