

The effect of mutations in lipopolysaccharide biosynthetic genes on the virulence of  
*Salmonella typhimurium* for the mouse

by:

Laurence Vincent Collins, B.Sc. (Dublin); M.Sc. (Calgary)

## SUMMARY

In **Chapter 1** of the work, the literature pertaining to the pathogenesis of *Salmonella* in animals and humans is first reviewed. This section covers the genetic basis of bacterial virulence, as far as it is understood, and describes genetic modifications attenuating for the virulence of *Salmonella* strains. Some such strains have been used as live oral vaccines against salmonellosis of humans and animals. One mutation which is attenuating for the mouse-virulence of *Salmonella typhimurium* is *galE*. Strains with mutations in *galE* are affected in lipopolysaccharide (LPS) biosynthetic ability, among other features. The possibility that other mutations affecting LPS biosynthesis are also attenuating has not been explored for mutations in *rfc* or *pml*. As this is the work of this thesis, **Chapter 1** concludes with a review of the structure of LPS, and the enzymology and genetics of its biosynthesis.

**Chapter 2** covers the Materials and Methods used in the work.

In **Chapter 3**, the *rfc* gene of *S. typhimurium* is cloned, by direct selection in an *rfc* mutant, and confirmed to complement the lesions in both an older point mutant in *rfc*, and a new *IS10* insertion mutant. In **Chapter 4**, the gene is sequenced and the sequence analysed. There is a high frequency of modulating codons in the presumptive gene, explaining why difficulties were experienced in visualisation of the protein product in a variety of systems.

In **Chapter 5**, the *pml* gene of *S. typhimurium* is cloned and analysed, while **Chapter 6** details the sequence of the gene, which is very like that of *Escherichia coli* K-12. The protein product of this gene was readily visualised in minicells.

In Chapter 7, both of the wild-type *rfc* and *pmi* genes are interrupted *in vitro* by the insertion of a Km-resistance cassette, and these insertion mutations recombined (singly) into the genome of virulent *S. typhimurium* C5. Comparisons, in both LD<sub>50</sub> tests, and in short-term colonisation experiments, of the wild-type C5, and the otherwise isogenic mutants, showed that either mutation greatly reduced the virulence of C5 for the mouse. Both mutants persisted well in the spleen following oral administration, unlike a *galE* mutant of C5. Both mutants were effective as live oral vaccines against C5 infection in the mouse.

In Chapter 8, the results of the work are briefly summarised. A conclusion is that an *S. typhimurium* strain which is capable of the biosynthesis of a full LPS core is able to colonise the spleens of animals infected orally with such a strain.

## TABLE OF CONTENTS

	Page
CHAPTER 1: INTRODUCTION	1
1.1 The pathogenesis of <i>Salmonella</i> infection	2
1.1.1 Intestinal colonization	2
1.1.2 Survival within macrophages	5
1.1.3 Host responses to <i>Salmonella</i> infection	6
1.2 <i>Salmonella</i> virulence factors	8
1.2.1 <i>Salmonella</i> enterotoxin	8
1.2.2 Adherence and motility factors	8
1.2.3 Lipopolysaccharide	9
1.2.4 Virulence plasmids	11
1.3 Parenteral vaccines against <i>Salmonella</i> infection	12
1.4 Peroral vaccination against <i>Salmonella</i> infection	13
1.4.1 Inactivated oral vaccines	13
1.4.2 Live oral vaccines	14
1.4.2.1 Spontaneously derived attenuated <i>Salmonella</i> strains	15
1.4.2.2 Auxotrophic mutants	15
1.4.2.3 Mutants defective in global regulation	18
1.4.2.4 Virulence plasmid-cured strains	21
1.4.2.5 Mutants with defects in virulence genes	21
1.5 Bivalent live oral <i>Salmonella</i> -based vaccines	22
1.6 Core lipopolysaccharide structure and biosynthesis	23
1.6.1 LPS structure	23
1.6.2 Structure and biosynthesis of lipid A	23
1.6.3 Structure and biosynthesis of KDO	24
1.6.4 Structure and biosynthesis of the LPS core region	25
1.6.4.1 The inner core	25
1.6.4.2 The outer core	26
1.7 Structure and biosynthesis of O-antigen	27
1.7.1 O-repeat unit biosynthesis	27
1.7.2 O-repeat unit polymerization	28
1.7.3 Modifications to polymerase activity	29
1.7.4 Transfer of O-repeat units to the core	31
1.8 The topology of lipopolysaccharide biosynthesis	31
1.9 The genetics of lipopolysaccharide biosynthesis	32
1.9.1 Core LPS	32
1.9.2 Genetics of O-repeat unit synthesis	33
1.9.3 Genetics of O-repeat unit polymerization	35
1.10 Aims of this study	36
 CHAPTER 2: MATERIALS AND METHODS	 38
2.1 Chemicals and reagents	39
2.2 Enzymes	40
2.3 Synthesis of oligodeoxynucleotides	40
2.4 Growth media	40
2.5 Bacterial strains and plasmids, and bacteriophage	41
2.5.1 Maintenance of bacterial strains	41
2.5.2 Bacteriophage sensitivity tests	42
2.6 Phage ES18-mediated transduction	43
2.7 Transformation procedure	43
2.8 Bacterial conjugation	43

2.9	Transposon mutagenesis	44
2.9.1	Transposition with Tn5	44
2.9.2	Transposition with Tn10	44
2.9.3	Transposition with Tn1725	45
2.10	DNA extraction procedures	45
2.10.1	Plasmid DNA isolation	45
2.10.2	Preparation of genomic DNA	47
2.11	Analysis and manipulation of DNA	48
2.11.1	DNA quantitation	48
2.11.2	Restriction endonuclease digestion of DNA	48
2.11.3	Analytical and preparative separation of restriction fragments	48
2.11.4	Calculation of restriction fragment size	49
2.11.5	Dephosphorylation and ligation of DNA	49
2.11.6	Cosmid bank construction	50
2.11.7	End-filling with Klenow fragment	50
2.11.8	Nick-translation	51
2.11.9	Random primer labelling	51
2.11.10	Southern transfer and hybridization	51
2.12	Autoradiography	52
2.13	Protein and LPS analysis	52
2.13.1	SDS polyacrylamide gel electrophoresis	52
2.13.2	Minicell procedures	53
2.13.3	Maxicell procedures	53
2.13.4	Bacterial cell-free coupled transcription-translation	54
2.13.5	T7 polymerase / promoter system	54
2.13.6	LPS preparation	55
2.13.7	LPS-specific silver staining	55
2.13.8	Cell fractionation	55
2.14	Phosphomannose isomerase enzyme activity assay	56
2.15	M13 cloning and sequencing procedures	56
2.15.1	Preparation of M13 replicative form (RF) DNA	56
2.15.2	Cloning with M13mp18 and M13mp19	57
2.15.3	Transfection of JM101	57
2.15.4	Screening M13 vectors for inserts	57
2.15.5	Purification of single-stranded template DNA	58
2.15.6	Dideoxy sequencing protocol with Sequenase	59
2.15.7	Double stranded sequencing	60
2.15.8	DNA sequencing gels	61
2.15.9	Analysis of DNA sequences	62
2.16	Animal experiments	62
2.16.1	Mice	62
2.16.2	Preparation of bacteria for injection	62
2.16.3	Virulence and protective capacity of <i>S. typhimurium</i> derivatives	63
2.16.4	Colonization of mice by strains of <i>S. typhimurium</i>	63
CHAPTER 3: Molecular cloning and characterisation of the <i>rfc</i> gene for an O-antigen polymerase of <i>Salmonella typhimurium</i>		64
3.1	Introduction	65

3.2 Results	66
3.2.1 Construction of a lambda-sensitive <i>rfc</i> strain	66
3.2.2 Insertional inactivation of the <i>rfc</i> locus of C5	67
3.2.3 Cosmid cloning of the <i>S. typhimurium rfc</i> locus	69
3.2.4 Physical mapping of the <i>rfc</i> <sup>+</sup> cosmid and cutdowns	69
3.2.4.1 <i>Hind</i> III Cutdowns of pADE201	69
3.2.4.2 Transposon mutagenesis with Tn5 and Tn1725	69
3.2.5 Confirmation of the location of the IS10 element in J208-B1 and J208-B2	70
3.2.6 LPS phenotype analysis by SDS-PAGE	70
3.2.7 Analysis of plasmid-encoded polypeptides	71
3.2.7.1 Minicell and maxicell analysis of proteins expressed by <i>rfc</i> <sup>+</sup> plasmids	72
3.2.7.2 <i>In vitro</i> transcription-translation analysis of proteins encoded by <i>rfc</i> <sup>+</sup> plasmids	73
3.2.7.3 T7 polymerase / promoter system analysis of plasmid-encoded proteins	73
3.2.8 Distribution of the <i>rfc</i> locus among <i>Salmonella</i> strains	74
3.3 Discussion	75
 CHAPTER 4: Nucleotide sequence and genetic organisation of the <i>rfc</i> gene of <i>Salmonella typhimurium</i>	 78
4.1 Introduction	79
4.2 Results	79
4.2.1 <i>rfc</i> nucleotide sequence determination and analysis	79
4.2.1.1 DNA sequencing strategy	79
4.2.1.2 Nucleotide sequence analysis of <i>rfc</i>	80
4.2.1.3 Location of the <i>rfc</i> ::Tn1725 insertions, and Tn1725 insertions not inactivating <i>rfc</i>	82
4.2.1.4 Transcriptional termination	82
4.2.1.5 Codon and base usage	83
4.2.2 The putative Rfc protein	85
4.2.2.1 Hydropathic profile of the Rfc protein	85
4.2.2.2 Predicted secondary structure of the Rfc protein	85
4.3 Discussion	86
 CHAPTER 5: Molecular cloning and characterisation of the phosphomannose isomerase gene of <i>Salmonella typhimurium</i>	 89
5.1 Introduction	90
5.2 Results	91
5.2.1 Cosmid cloning of <i>pmi</i> <sub>stm</sub>	91
5.2.2 Transposon mutagenesis of pADE250	92
5.2.3 Sub-cloning the <i>pmi</i> <sub>stm</sub> gene from pADE250	92
5.2.4 Analysis of the <i>pmi</i> <sub>stm</sub> -encoded polypeptide	93
5.2.4.1 Minicell analysis	93
5.2.4.2 Determination of the extent of processing of the Pmi polypeptide	93
5.2.5 Cellular localization of the Pmi protein	94
5.2.6 Assays for Pmi enzyme activity	95
5.2.7 Homology of <i>pmi</i> <sub>stm</sub> with <i>E. coli</i> , <i>Shigella</i> , and <i>Salmonella</i> spp.	95
5.3 Discussion	96

CHAPTER 6: Nucleotide sequence analysis and genetic organisation of the <i>pmi<sub>stm</sub></i> gene of <i>Salmonella typhimurium</i>	99
6.1 Introduction	100
6.2 Results	101
6.2.1 <i>pmi<sub>stm</sub></i> nucleotide sequence determination and analysis	101
6.2.1.1 DNA sequencing strategy	101
6.2.1.2 Nucleotide sequence analysis of <i>pmi<sub>stm</sub></i>	101
6.2.1.3 Location of a <i>pmi<sub>stm</sub>::Tn1725</i> insertion	103
6.2.1.4 Codon and base usage	103
6.2.2 The Pmi protein	103
6.2.2.1 Hydropathic profile and secondary structure of the Pmi protein	103
6.2.2.2 Comparison of <i>pmi<sub>stm</sub></i> with related sequences	104
6.3 Discussion	105
CHAPTER 7: Construction and characterization of site-directed mutations in the chromosome of <i>Salmonella typhimurium</i> , and analysis of the effects of these mutations on the virulence of <i>S. typhimurium</i> for mice	107
7.1 Introduction	108
7.2 Results	110
7.2.1 Modifications of pHSG422	110
7.2.2. Construction of a site-specific <i>rfc</i> mutation in <i>S. typhimurium</i>	110
7.2.2.1 Insertion of a Km <sup>R</sup> cartridge into <i>rfc</i>	111
7.2.2.2 Sub-cloning <i>rfc::Km<sup>R</sup></i> into pADE262	111
7.2.2.3 Mobilization of pADE264	112
7.2.2.4 Construction and characterization of C5 <i>rfc::Km<sup>R</sup></i>	112
7.2.3. Construction of a site-specific <i>pmi</i> mutation in <i>S. typhimurium</i>	113
7.2.3.1 Insertion of a Km <sup>R</sup> cartridge into <i>pmi<sub>stm</sub></i>	113
7.2.3.2 Sub-cloning <i>pmi<sub>stm</sub>::Km<sup>R</sup></i> into pADE261	114
7.2.3.3 Mobilization of pADE266	114
7.2.3.4 Construction and characterization of C5 <i>pmi::Km<sup>R</sup></i>	114
7.2.4 The virulence and immunogenicity of the <i>rfc::Km</i> and the <i>pmi::Km</i> constructs in mice	116
7.2.4.1 The virulence and immunogenicity of the strains in mice	116
7.3 Discussion	118
CHAPTER 8: Conclusions	122
Bibliography	126
