Public Health Information Development Unit, The University of Adelaide *A Collaborating Unit of the Australian Institute of Health and Welfare*

This profile was produced by PHIDU, the Public Health Information Development Unit at The University of Adelaide, South Australia. The work was funded under a grant from the Australian Government Department of Health and Ageing. The views expressed in this profile are solely those of the authors and should not be attributed to the Department of Health and Ageing or the Minister for Health and Ageing.

The data in this report are designed to be used for needs assessment and planning purposes: while they are based on the best available data and analytic processes, data available by postcode or Statistical Local Area, as used in this report, cannot be precisely translated to Division. Division totals in the report should, therefore, be seen as estimates. Interpretation of differences between data in this profile and similar data from other sources needs to be undertaken with care, as such differences may be due to the use of different methodology to produce the data.

Population health profile of the *Adelaide Western Division of General Practice*

Introduction

This profile has been designed to provide a description of the population of the Adelaide Western Division of General Practice, and aspects of their health. Its purpose is to provide information to support a population health approach, which aims to improve the health of the entire population and to reduce health inequalities among population groups: a more detailed discussion of a population health approach is provided in the supporting information, page 17.

Contents

The profile includes a number of tables, maps and graphs to profile population health in the Division and provides comparisons with other areas (eg. Adelaide and Australia). Specific topics covered include:

- a socio-demographic profile (pages 2-6);
- GP workforce data (page 7);
- immunisation rates (page 7);
- rates of premature death (page 8); and
- estimates of the prevalence of chronic disease and selected risk factors (pages 9-13).

Adelaide Western Division of General Practice

Adelaide Divisions of General Practice

Adelaide Western DGP by SLA

Socio-demographic profile

Population

The Adelaide Western DGP had an Estimated Resident Population of 219,590 at 30 June 2004.

Figure 1: Annual population change, Adelaide Western DGP‡, Adelaide, South Australia, and Australia, 1991 to 1996, 1996 to 2001 and 2001 to 2004

Over the five years from 1991 to 1996, the Division's population declined by 0.4% on average each year, compared to increases in Adelaide and South Australia (both 0.4%). From 1996 to 2001, the annual percentage increase in the Division was 0.2%, lower than the increases for Adelaide and South Australia (both 0.6%). There was no change in the Division's population from 2001 to 2004, compared to annual increases of 0.4% for Adelaide and South Australia.

Figure 2: Population in Adelaide Western DGP‡ and Australia, by age and sex, 2004

The most notable differences in the age distribution of the Division's population (when compared to Australia overall) are:

- at younger ages – noticeably lower proportions of children at ages 0 to 14 years and young people aged 15 to 19 years;
- from 20 to 44 years – a slightly lower proportion of females; and
- at older ages – increasingly higher proportions, particularly for females.

Table 1: Population by age, Adelaide Western DGP‡ and Australia, 2004

| Age group (years) | Adelaide Western DGP | | Australia | |
|-------------------|----------------------|--------------|-------------------|--------------|
| | No. | % | No. | % |
| 0-14 | 35,037 | 16.0 | 3,978,751 | 19.8 |
| 15-24 | 28,055 | 12.8 | 2,762,769 | 13.8 |
| 25-44 | 63,393 | 28.9 | 5,881,048 | 29.3 |
| 45-64 | 52,904 | 24.1 | 4,864,037 | 24.2 |
| 65-74 | 18,353 | 8.4 | 1,374,792 | 6.8 |
| 75-84 | 16,645 | 7.6 | 934,505 | 4.7 |
| 85+ | 5,202 | 2.4 | 295,602 | 1.5 |
| Total | 219,590 | 100.0 | 20,091,504 | 100.0 |

As shown in the age-sex pyramid above, the Adelaide Western DGP had relatively fewer children aged 0 to 14 years (16.0%) and young people aged 15 to 24 years (12.8%) than Australia as a whole (with 19.8% and 13.8%) (Table 1). Conversely, the proportions of the Division's population aged 65 years and over were higher than those for Australia.

The Adelaide Western DGP comprised 15.2% of people born in predominantly non-English speaking countries and resident in Australia for five years or more (Table 2), markedly higher than the 10.7% in Adelaide. Recent arrivals (those resident in Australia for less than five years) from non-English speaking countries comprised 2.4% of the Division's population (compared to 1.5% in Adelaide).

‡ See note under 'Data converters and mapping' re calculation of Division totals on this page

Of these residents, 4.8% had poor proficiency in English (determined when people aged five years and over born overseas in predominantly non-English speaking countries reported in the Census speaking another language and speaking English 'not well' or 'not at all'), compared to lower proportions in Adelaide (2.3%), South Australia (1.8%) and Australia (2.4%).

Table 2: Non-English speaking born, Adelaide Western DGP, Adelaide, South Australia and Australia, 2001

| People born in predominantly non-English speaking countries | Adelaide Western DGP | | Adelaide | | South Australia | | Australia | |
|---|----------------------|------|----------|------|-----------------|-----|-----------|------|
| | No. | % | No. | % | No. | % | No. | % |

Figure 3: Major non-English speaking birthplaces, Adelaide Western DGP, 2001

Socioeconomic status

The indicators presented in this section describe geographic variations in the distribution of the population for a number of key socioeconomic influences, which impact on the health and wellbeing of populations.

The Adelaide Western DGP had marginally higher proportions of single parent families (11.7%) and Aboriginal and Torres Strait Islanders (1.4%) compared to Adelaide as a whole (with 11.5% and 1.1%, respectively) (Figure 4, Table 3).

Full-time secondary school education participation of 16 year olds living in the Division (80.2%) was similar to the rate in Adelaide (80.8%).

A higher proportion of the Division's households received rent assistance from Centrelink (14.0%) compared to Adelaide (12.6%), and there were markedly more dwellings rented from the State housing authority (11.5%, compared to 8.0%). The proportion of dwellings with no access to a motor vehicle (14.5%) was also markedly higher than the rates for Adelaide (10.9%) and South Australia (9.9%).

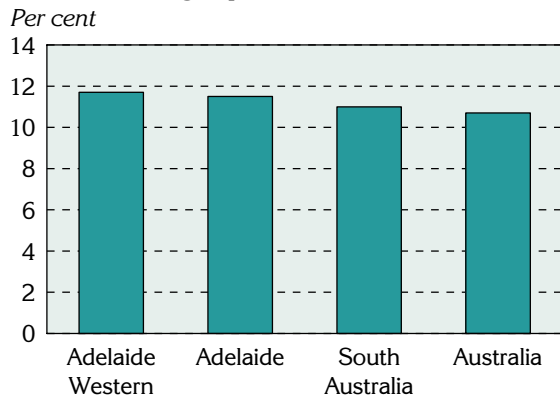

The Division had notably lower proportions of the population who reported using, at home, a computer (35.8%) and the Internet (23.2%), compared to Adelaide (42.4% and 27.7%).

These socioeconomic indicators show the Division to comprise a population of relatively low socioeconomic status when compared with Adelaide: see also the note on page 5 (Summary of socioeconomic ranking).

‡ See note under 'Data converters and mapping' re calculation of Division total

The unemployment rate of 7.6% in Adelaide Western DGP was higher than in Adelaide (6.6%) and South Australia (6.5%) (Figure 4, Table 4). The labour force participation rate (72.3%) and female labour force participation rate (69.9%) were both marginally lower than those for Adelaide (75.3% and 70.9%) and South Australia (75.3% and 70.4%).

Table 4: Unemployment and labour force participation, Adelaide Western DGP, Adelaide, South Australia and Australia, 2003

Summary of the socioeconomic ranking of the Adelaide Western DGP

Following the 2001 Census, the Australian Bureau of Statistics (ABS) produced four socio-economic indexes for areas (SEIFA) which describe aspects of the socioeconomic profile of populations in areas. The scores for these indexes for each Statistical Local Area (SLA) or part SLA in Adelaide Western DGP are shown in the supporting information Table 9, page 18: SLAs are described on page 19.

The Adelaide Western DGP area's SEIFA Index of Relative Socio-Economic Disadvantage (IRSD) score is 963, below (3.7%) the averages for Australia and Adelaide (both 1000); this highlights the relatively lower socioeconomic status profile of the Adelaide Western DGP population. There are also notable variations in the IRSD within the Division at the SLA level (Map 1).

Map 1: Index of Relative Socio-Economic Disadvantage by SLA, Adelaide Western DGP, 2001

See note under 'Methods' re Data converters and mapping concerning SLAs mapped to the Division. This is of particular relevance where part of an SLA is mapped to the Division.

General medical practitioner (GP) supply

A total of 178.1 full-time equivalent (FTE) GPs and 213.5 full-workload equivalent (FWE¹) GPs worked in the Division in 2003/04 (Table 5). Of the FWE GPs, 22.2% were female, and 41.4% were over 55 years of age (compared to 23.4% and 30.5%, respectively, for South Australia).

Apart from the day-time population, the rates of population per FTE GP varied, depending on the population measure used, from a high of 1,234 people per GP (calculated on the average Estimated Resident Population (ERP) as at 30 June 2003 and 2004), to a low of 1,183 people per GP (calculated on the 1 August 2001 Census count – all people counted in the Division on Census night, including visitors from Australia and overseas). The rates of population per FWE GP were lower, ranging from 987 (calculated on the Census count) to 1,029 (calculated on the ERP). When calculated on the estimated day-time population, the rates were 7.0% above those calculated on the Usual Resident Population (usual residents of the Division counted in Australia on Census night).

Based on the ERP, the rates of population per GP in Adelaide Western DGP were lower than for South Australia and Australia, indicating a higher level of provision of GP services in the Division.

Table 5: Population per GP in Adelaide Western DGP, South Australia and Australia, 2003/04

| Population measure | Population | GPs | | Population per GP | |
|---|------------|--------|--------|-------------------|-------|
| | | FTE | FWE | FTE | FWE |
| Adelaide Western DGP | | | | | |
| Census count (adjusted)* | 210,650 | 178.1 | 213.5 | 1,183 | 987 |
| Usual Resident Population (URP) (adjusted)* | 212,115 | .. | .. | 1,191 | 993 |
| Estimated Resident Population (ERP) | 219,700 | .. | .. | 1,234 | 1,029 |
| Day-time population (estimated on URP)* ‡ | 226,884 | .. | .. | 1,274 | 1,063 |
| South Australia (ERP) | 1,530,276 | 1,181 | 1,354 | 1,296 | 1,130 |
| Australia (ERP) | 19,989,303 | 14,246 | 16,872 | 1,403 | 1,185 |

* The Census count, Usual Resident Population and Day-time population were adjusted to reflect population change between 2001 and 2003/04, as measured by the ERP

‡ See note under 'Data converters and mapping' re calculation of Division totals

Immunisation

Data from the Australian Childhood Immunisation Register show that 95.0% of children in the Division in 2002 were fully immunised at age one, marginally above the Australian proportion of 94.2%.

Immunisation by provider type for children between the ages of 0 to 6 is shown in (Table 6). The proportion of children in the Division who were immunised by a general practitioner was 61.9%, compared to 70.0% for Australia, with 28.3% immunised at a local government council and 9.8% at a community health centre, or by a community health worker.

Table 6: Childhood immunisation at ages 0 to 6 by provider type, Adelaide Western DGP and Australia, 2003/04

| Provider | Adelaide Western | Australia |
|-----------------------------------|------------------|------------------|
| | % | % |
| General practitioner | 61.9 | 70.0 |
| Local government council | 28.3 | 16.6 |
| Community health centre/ worker | 9.8 | 9.8 |
| Public hospital | 0.0 | 2.1 |
| Aboriginal health service/ worker | 0.0 | 0.9 |
| Other* | 0.0 | 0.6 |
| Total: Per cent | 100.0 | 100.0 |
| Number | 35,668 | 3,843,610 |

* Includes immunisations in/ by State Health Departments, RFDS and private hospitals

¹The FWE value is calculated for each GP location by dividing the GP's total Medicare billing (Schedule fee value of services provided during the reference period) by the mean billing of full-time doctors in that derived major speciality for the reference period. Thus, a GP earning 20% more than the mean billing of full-time doctors is shown as 1.2 FWE: this differs from full-time equivalent (FTE) counts, where the FTE value of any GP cannot exceed 1.0

Premature mortality

Deaths at ages below 75 years are used as an indicator of health status, as they largely reflect premature deaths, given the current levels of life expectancy in Australia.

The 'all causes' death rate in the Division at ages 0 to 74 years (310.9 deaths per 100,000 population) is notably higher than for Adelaide (286.1) and Australia (290.4): the rates have been age standardised to allow for comparisons between areas, regardless of differences in age profiles between the Division and Australia.

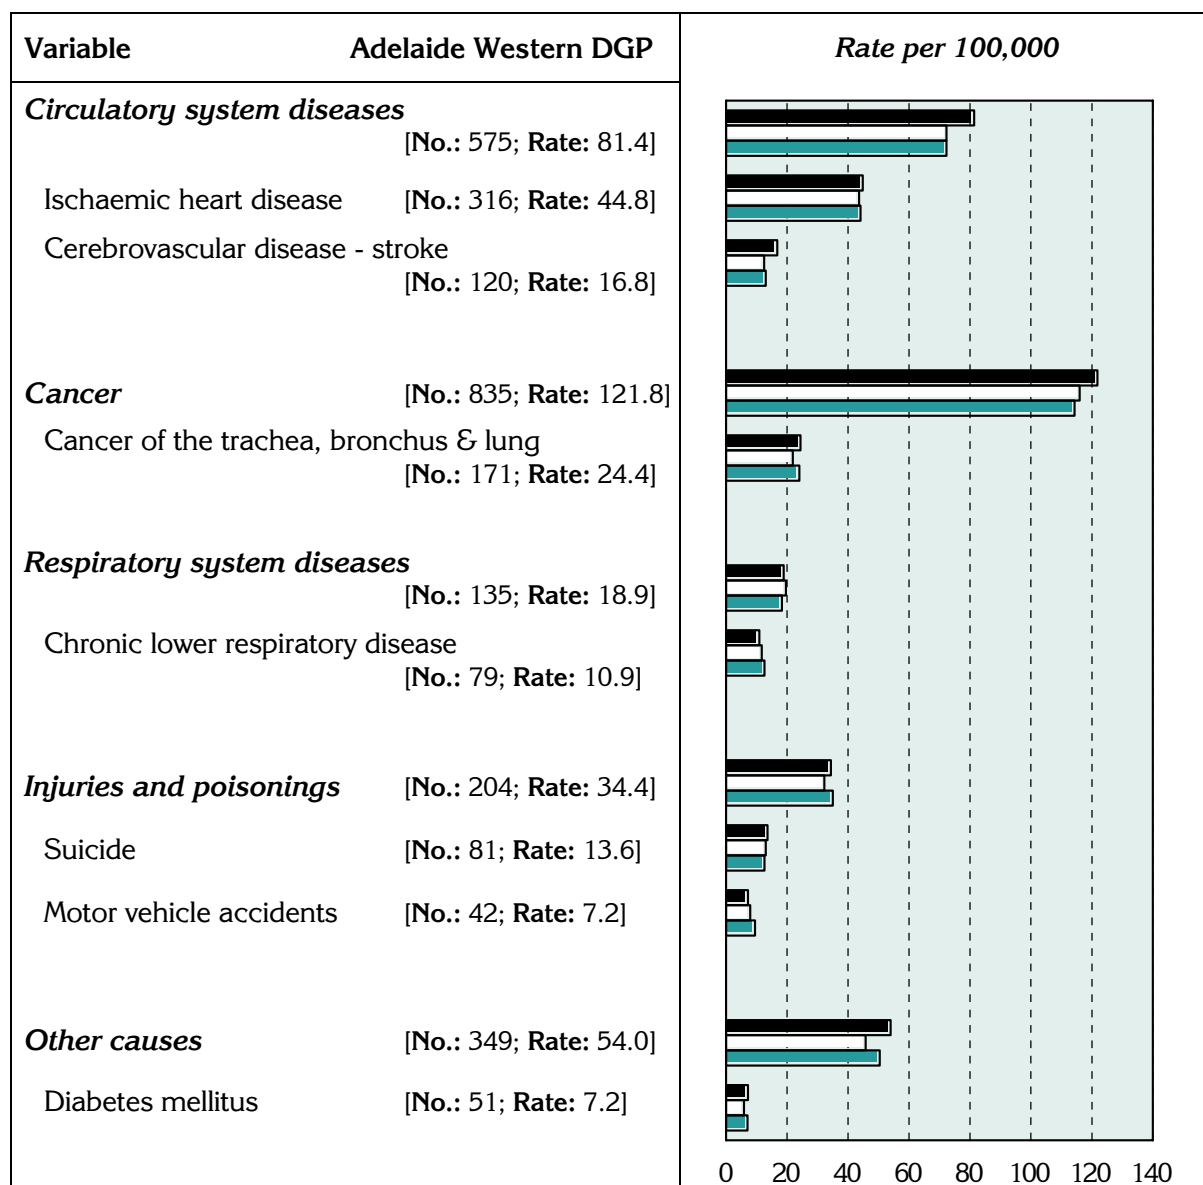

The major causes of premature mortality in the Division, as for Adelaide and Australia as a whole, are cancer and diseases of the circulatory system (Figure 5). With the exception of the major causes of respiratory diseases and injuries and poisonings, and the individual cause of motor vehicle accidents, death rates in the Division were higher than those for Adelaide and Australia.

The data on which the following chart is based are in Table 12.

Figure 5: Deaths before 75 years of age by major condition group and selected cause, Adelaide Western DGP‡, Adelaide and Australia, 2000-02*

Indirectly age standardised rate per 100,000 population

■ Adelaide Western DGP □ Adelaide ■ Australia

* 'No.' is the total number of deaths for the 2000-02 period; 'Rate' is an annual rate, based on the 3 year average

‡ See note under 'Data converters and mapping' re calculation of Division totals

Chronic diseases and risk factors

The term “chronic disease” describes health problems that persist across time and require some degree of health care management (WHO 2002). Chronic diseases tend to have complex causes, are often long lasting and persistent in their effects, and can produce a range of complications (Thacker et al. 1995). They are responsible for a significant proportion of the burden of disease and illness in Australia and other westernised countries. Given the ageing of the population, this trend is likely to continue.

At different life stages, risk factors for chronic diseases and their determinants include genetic predisposition; poor diet and lack of exercise; alcohol misuse and tobacco smoking; poor intra-uterine conditions; stress, violence and traumatic experiences; and inadequate living environments that fail to promote healthy lifestyles (NPHP 2001). Risk factors are also more prevalent in areas of low socioeconomic status, and in communities characterised by low levels of educational attainment; high levels of unemployment; substantial levels of discrimination, interpersonal violence and exclusion; and poverty. There is a higher prevalence of risk factors among Indigenous communities, and other socioeconomically disadvantaged Australians (NPHP 2001).

Background

In this section, estimates of the prevalence of selected chronic diseases and risk factors, and two summary measures of health, are shown for the Division‡, and for SLAs within the Division: note that the estimates have been predicted from self-reported data, and are not based on clinical records or physical measures. The chronic diseases and risk factors are those for which sufficiently reliable estimates can be made for the Division from national survey data. The process by which the estimates have been made, and details of their limitations, are described in the Notes section, pages 15-16. The data on which the following charts are based are in Table 13.

The estimates provide information of relevance to a number of the National Health Priority Areas (NHPAs – asthma; cardiovascular health; diabetes mellitus; injury prevention and control; mental health; and arthritis and musculoskeletal conditions: estimates have not been made for cancer control, the other NHPA). The risk factors for which estimates have been made are those which are accepted as being associated with these important chronic conditions. They are overweight (not obese), obesity, smoking, lack of exercise and high-risk alcohol use.

The numbers are estimates for an area, not measured events as are death statistics: they should be used as indicators of likely levels (and not actual levels) of a condition or risk factor in an area.

Prevalence estimates: chronic disease‡

It is estimated that, with the exception of injury, relatively more people in Adelaide Western DGP reported having any of the selected chronic conditions than in Australia as a whole (Figure 6): that is, the prevalence rates per 1,000 population were higher. The generally higher rates are consistent with the socioeconomic status profile of the population of the Division.

Prevalence estimates: self-reported health‡

The NHS includes two measures of self-reported health. One is the Kessler Psychological Distress Scale–10 items (K–10). This is a scale of non-specific psychological distress based on 10 questions about negative emotional states in the four weeks prior to interview, asked of respondents 18 years and over (ABS 2002). The other asks respondents aged 15 years and over to rate their health on a scale from ‘excellent’, through ‘very good’, ‘good’ and ‘fair’, to ‘poor’ health.

The population of the Division aged 18 years and over is estimated to have more people with very high psychological distress levels as measured by the K–10 (Figure 7) compared to Australia as a whole. The proportion of the population aged 15 years and over estimated to have reported their health as ‘fair’ or ‘poor’ is also notably above the national average.

¹ Kessler 10

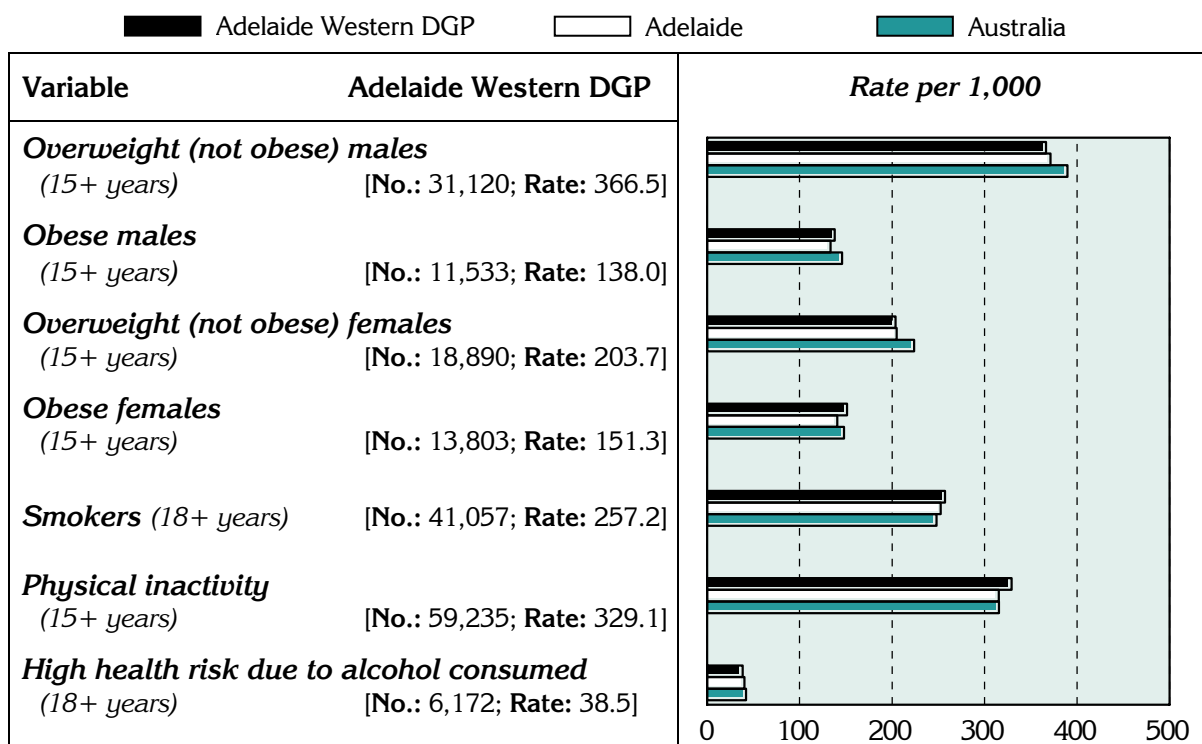

‡ See note under 'Data converters and mapping' re calculation of Division totals

Prevalence estimates: risk factors‡

The Adelaide Western DGP had marginally higher rates (when compared with the Australian population) for obesity in females, smoking and lack of exercise (Figure 8). The reported rates for the other selected risk factors were lower than the national rates.

Figure 8: Estimates* of selected risk factors, Adelaide Western DGP‡, Adelaide and Australia, 2001

Indirectly age standardised rate per 1,000 population

* 'No.' is a weighted estimate of the number of people in Adelaide Western DGP with these risk factors and has been predicted using data from the 2001 NHS and known data for the Division

‡ See note under 'Data converters and mapping' re calculation of Division totals

The following maps provide details of the geographic distribution, at the SLA level, of the estimated prevalence of chronic disease (Map 2), self-reported health (Map 3) and risk factors associated with chronic disease (Map 4).

In the following maps, users should note that the estimates shown for part SLAs in the Division (see Table 11, page 19, for per cent of SLA population in the Division) represent the estimates for the whole SLA, and not just the part shown. However, SLAs with only a small proportion of their population in the Division are likely to have little influence on the total estimates for the Division, which have been based on the percentage of the SLA population in the Division.

² *Census count* - those counted in the Division on Census night, including tourists, business people and other visitors

³ *Usual Resident Population* - those who usually live there and who were in Australia at the time and would have provided details in the Census at the address where they were counted

⁴ See notes below

Chronic diseases and associated risk factors

The data for chronic conditions and risk factors for SLAs have been estimated from the 2001 National Health Survey (NHS), conducted by the ABS: see note below on synthetic estimates. The NHS sample includes the majority of people living in private households, but excludes the most remote areas of Australia. These areas cover 86.4% of Australia's land mass and comprise just 3% of the total population, however, 28% of Australia's Indigenous population live in these areas. Thus it has not been possible to produce these estimates for Divisions with relatively high proportions of their population in the most remote areas of Australia.

The data for chronic conditions and risk factors are self-reported data, reported to interviewers in the 2001 NHS. Table 8 includes notes relevant to this data.

Table 8: Notes on estimates of chronic diseases and associated risk factors

| Indicator | Notes on the data |
|---|--|
| Estimates of chronic disease and injury (Figure 6 and Map 2) | |
| Long term conditions | - Respondents were asked whether they had been diagnosed with any long term health condition (a condition which has lasted or is expected to last for 6 months or more), and were also asked whether they had been told by a doctor or nurse that they had asthma, cancer, heart and circulatory conditions, and/or diabetes |
| Injury event | - Injuries which occurred in the four weeks prior to interview |
| Estimates of measures of self-reported health (Figure 7 and Map 3) | |
| Very high psychological distress levels (K10) | - Derived from the Kessler Psychological Distress Scale-10 items (K-10), which is a scale of non-specific psychological distress based on 10 questions about negative emotional states in the 4 weeks prior to interview. 'Very high' distress is the highest level of distress category (of a total of four categories) |
| Fair or poor self-assessed health status | - Respondent's general assessment of their own health, against a five point scale from excellent through to poor – 'fair' or 'poor' being the two lowest in the scale |
| Estimates of selected risk factors (Figure 8 and Map 4) | |
| Overweight (not obese) | - Based on self-reported height and weight; BMI calculated and grouped into categories (to allow reporting against both WHO and NHMRC guidelines) - overweight: 25.0 to less than 30.0 |
| Obese | - Based on self-reported height and weight; BMI calculated and grouped into categories (to allow reporting against both WHO and NHMRC guidelines) – obese: 30.0 and greater |
| Smokers | - Respondent's undertaking regular (or daily) smoking at the time of interview |
| Physical inactivity | - Did not exercise in the two weeks prior to interview through sport, recreation or fitness (including walking) – excludes incidental exercise undertaken for other reasons, such as for work or while engaged in domestic duties |
| High health risk due to alcohol consumed | - Respondent's estimated average daily alcohol consumption in the seven days prior to interview (based on number of days and quantity consumed). Alcohol risk levels were grouped according to NHMRC risk levels for harm in the long term, with 'high risk' defined as a daily consumption of more than 75 ml for males and 50 ml for females |

Note: For a full description, refer to *ABS 2001 National Health Survey, Cat. No. 4364.0* and *ABS 2001 Health Risk Factors, Cat. No. 4812.0*

Methods

Synthetic estimates

The estimates of the prevalence of chronic disease and associated risk factors have been predicted for a majority of SLAs across Australia, using modelled survey data collected in the 2001 ABS National Health Survey (NHS) and known characteristics of the area. A synthetic prediction can be interpreted as the likely value for a 'typical' area with those characteristics: the SLA is the area level of interest for this project (where SLAs had small populations they were grouped to larger areas). This work was undertaken by the Australian Bureau of Statistics, as they hold the NHS unit record files: the small area data were compiled by PHIDU.

The approach used is to undertake an analysis of the survey data for Australia to identify associations in the NHS data between the variables that we wish to predict at the area level (eg. prevalence of chronic conditions and risk factors) and the data we have at the area level (eg. socioeconomic status, use of health services). The relationship between these variables for which we have area level data (the predictors) and the reporting of chronic conditions in the NHS is also a part of the model that is developed by the ABS. For example, such associations might be between the number of people reporting specified chronic conditions in the NHS and:

- the number of hospital admissions (in total, to public and to private hospitals, by age, sex and diagnosis),
- socioeconomic status (as indicated by Census data, or for recipients of government pensions and benefits), and
- the number of visits to a general medical practitioner.

The results of the modelling exercise are then applied to the SLA counts of the predictors. The prediction is, effectively, the likely value for a typical area with those characteristics. The raw numbers were then age-standardised, to control for the effects of differences in the age profiles of areas.

The numbers are estimates for an area, not measured events as are death statistics: they should be used as indicators of likely levels of a condition or risk factor in an area.

Premature deaths

Details of deaths by SLA were purchased from the ABS. The raw numbers were then age-standardised, by the indirect method, to control for the effects of differences in the age profiles of areas.

Data converters and mapping

[Conversion to Division of data available by postcode](#)

The allocation of postcodes to Divisions was undertaken using information from the Department of Health and Ageing's web site, which shows the proportion of a postcode in a Division (Table 10).

[Conversion to Division of data available by SLA](#)

(marked in this profile as ‡ See note under 'Data converters and mapping' re calculation of Division total)

Where the data presented in these profiles were only available by SLA they have been converted to Division of General Practice areas using a concordance based on data at the 2001 Census. A copy of the concordance is included in the Population data: A Guide for Divisions of General Practice: it is also available from the Divisions' data area on PHIDU web site.

In brief, the concordance splits the data (eg number of deaths) for each SLA across one or more Divisions. The proportion of an SLA's data that is allocated to each Division was calculated from (a) CD level Census 2001 data that splits SLAs across approximations to postcodes (referred to as postal areas) and (b) data on the DoHA website that splits postcodes across Divisions. This concordance can be adjusted to meet any new configuration of Division boundaries based on the 2001 Collection Districts, or combinations thereof.

The estimated population of each SLA in this Division is shown in Table 11.

[Mapping](#)

In some Divisions the maps may include a very small part of an SLA which has not been allocated any population, or either has a population of less than 100 or has less than 1% of the SLA's total population: these areas are mapped with a pattern.

Supporting information

This and other information is also available at www.publichealth.gov.au.

A definition of population health

Population health, in the context of general practice, has been defined¹ as:

“The prevention of illness, injury and disability, reduction in the burden of illness and rehabilitation of those with a chronic disease. This recognises the social, cultural and political determinants of health. This is achieved through the organised and systematic responses to improve, protect and restore the health of populations and individuals. This includes both opportunistic and planned interventions in the general practice setting.”

The key determinants of health are social support networks, employment and working conditions, social environments, physical environments, geographical isolation, personal health practices, healthy child development, ageing and disability, biology and genetic endowment, health services, gender and culture.

In the Aboriginal and Torres Strait Islander context this means that a population health approach to health services will assist in ensuring “that Aboriginal and Torres Strait Islander people enjoy a healthy life equal to that of the general population, that is enshrined by a strong living culture, dignity and justice”.² This recognises the importance of achieving improvements to Aboriginal and Torres Strait Islander health and respects the particular health issues facing Indigenous people.

¹ “The role of general practice in population health – A Joint Consensus Statement of the General Practice Partnership Advisory Council and the National Public Health Partnership Group” (Joint Advisory Group on General Practice and Population Health 2001)

² As defined in the Strategic Framework for Aboriginal and Torres Strait Islander Health

SEIFA scores

Following the 2001 Census, the Australian Bureau of Statistics (ABS) produced four socioeconomic indexes for areas (SEIFA). The indexes describe various aspects of the socioeconomic make-up of populations in areas, using data collected in the 2001 Census.

The Index of Relative Socio-Economic Disadvantage (labelled ‘Disadvantage’ in Table 9) includes all variables that either reflect or measure disadvantage. The Index of Advantage/Disadvantage is used to rank areas in terms of both advantage and disadvantage: any information on advantaged persons in an area will offset information on disadvantaged persons in the area. The Index of Economic Resources and the Index of Education and Occupation were targeted towards specific aspects of advantage/disadvantage.

For further information on the composition and calculation of these indexes see the ABS Information Paper ABS Cat No. 2039.0 available on the ABS web site www.abs.gov.au. The scores for these indexes for each Statistical Local Area (SLA) or part SLA in Adelaide Western DGP are shown in Table 9.

In using this table, users should note that the index score shown for SLAs with less than 100 per cent in the Division represents the score for the whole SLA, and not just the part shown. However, SLAs with small proportions may have little influence on the average index score for the Division which has been based on the postcodes in the Division.

Table 9: SEIFA scores by SLA, Adelaide Western DGP, 2001

| SLA code | SLA name (% per cent of SLA in the Division) | | Index score | | | |
|--------------|---|---------------|--------------|------------|--------------------|------------------------|
| | | | Disadvantage | Advantage | Economic Resources | Education & Occupation |
| 41061 | Charles Sturt - Coastal | (100.0) | 1045 | 1035 | 1023 | 1035 |
| 41064 | Charles Sturt - Inner East | (100.0) | 969 | 948 | 936 | 960 |
| 41065 | Charles Sturt - Inner West | (100.0) | 960 | 937 | 932 | 947 |
| 41068 | Charles Sturt - North-East | (100.0) | 924 | 943 | 928 | 962 |
| 42601 | Holdfast Bay - North | (35.6) | 1061 | 1067 | 1050 | 1073 |
| 44064 | Marion - North | (11.1) | 974 | 969 | 946 | 988 |
| 45894 | Port Adel. Enfield - Inner | (21.8) | 882 | 902 | 898 | 922 |
| 45895 | Port Adel. Enfield - Coast | (100.0) | 976 | 959 | 959 | 957 |
| 45898 | Port Adel. Enfield - Port | (100.0) | 795 | 851 | 869 | 864 |
| 46510 | Prospect | (35.3) | 1061 | 1068 | 1032 | 1087 |
| 48411 | West Torrens - East | (75.0) | 986 | 989 | 956 | 1019 |
| 48414 | West Torrens - West | (80.6) | 1018 | 990 | 970 | 1002 |

* Proportions are approximate and are known to be incorrect in some cases, due to errors in the concordance used to allocate CDs to form postal areas. In addition, in a small number of cases, part(s) of an SLA can be allocated to another Division, sometimes several hundred kilometres away. Although adjustments have not been made to the concordance to correct these errors, the affected SLAs are highlighted in the table (shown in bold italic typeface)

Note: Scores are not shown for SLAs in the Division with estimated populations of less than 100 (refer to Table 11)

Statistical geography of the Adelaide Western DGP

The postcodes in the Division (as per the Department of Health and Ageing web site) are shown in (Table 10).

Table 10: Postcodes in Adelaide Western DGP, 2004

| Postcode | Per cent of postcode population in the Division* | Postcode | Per cent of postcode population in the Division* | Postcode | Per cent of postcode population in the Division* |
|----------|---|----------|---|----------|---|
| 5007 | 100 | 5017 | 100 | 5032 | 100 |
| 5008 | 100 | 5018 | 100 | 5033 | 100 |
| 5009 | 100 | 5019 | 100 | 5037 | 35 |
| 5010 | 100 | 5020 | 100 | 5038 | 33 |
| 5011 | 100 | 5021 | 100 | 5040 | 100 |
| 5012 | 100 | 5022 | 100 | 5045 | 50 |
| 5013 | 100 | 5023 | 100 | 5082 | 50 |
| 5014 | 100 | 5024 | 100 | 5084 | 50 |
| 5015 | 100 | 5025 | 100 | 5950 | 100 |
| 5016 | 100 | 5031 | 100 | | |

* Proportions are approximate

Source: Department of Health and Ageing web site (accessed online version as at February 2005):

<http://www.health.gov.au/internet/wcms/publishing.nsf/Content/health-pcd-programs-divisions-divspc.htm>

Statistical Local Areas (SLAs) are defined by the Australian Bureau of Statistics to produce areas for the presentation and analysis of data. In this Division, most Local Government Areas (LGAs) have been split into SLAs. For example, Charles Sturt LGA is comprised of four SLAs - Coastal, Inner East, Inner West and North-East. All of these SLAs and all or parts of the other SLAs listed in Table 11 comprise the Division.

Table 11: SLAs in Adelaide Western DGP by 2001 boundaries

| SLA code | SLA name | Per cent of the SLA's population in the Division* | Estimate of the SLA's 2004 population in the Division |
|--------------|-------------------------------|---|---|
| 41061 | Charles Sturt - Coastal | 100.0 | 31,102 |
| 41064 | Charles Sturt - Inner East | 100.0 | 21,518 |
| 41065 | Charles Sturt - Inner West | 100.0 | 24,893 |
| 41068 | Charles Sturt - North-East | 99.1 | 25,704 |
| 42601 | Holdfast Bay - North | 35.6 | 6,949 |
| 44064 | Marion - North | 11.1 | 2,820 |
| 45894 | Port Adelaide Enfield - Inner | 21.8 | 4,261 |
| 45895 | Port Adelaide Enfield - Coast | 100.0 | 28,315 |
| 45898 | Port Adelaide Enfield - Port | 100.0 | 26,141 |
| 46510 | Prospect | 35.3 | 6,787 |
| 48411 | West Torrens - East | 75.0 | 17,960 |
| 48414 | West Torrens - West | 80.6 | 23,126 |
| 48899 | Unincorporated Western | 100.0 | # |

* Proportions are approximate and are known to be incorrect in some cases, due to errors in the concordance used to allocate CDs to form postal areas. In addition, in a small number of cases, part(s) of an SLA can be allocated to another Division, sometimes several hundred kilometres away. Although adjustments have not been made to the concordance to correct these errors, the affected SLAs are highlighted in the table (shown in bold italic typeface)

Not shown as the total population is less than 100

Supporting data

The data used in Figure 5 to illustrate the rates of premature mortality in the Division are shown below in Table 12.

Table 12: Deaths before 75 years of age by major condition group and selected cause, Adelaide Western DGP‡, Adelaide and Australia, 2000-02*

Indirectly age standardised rate per 100,000 population

| Variable | Adelaide Western DGP‡ | | Adelaide | | Australia | |
|--|-----------------------|-------|----------|-------|-----------|--------|
| | No. | Rate | No. | Rate | No. | Rate |
| Circulatory system diseases | 575 | 81.4 | 2,315 | 72.3 | 38,357 | 72.3 |
| Ischaemic heart disease | 316 | 44.8 | 1,394 | 43.6 | 23,364 | 44.1 |
| Cerebrovascular disease – stroke | 120 | 16.8 | 403 | 12.5 | 6,920 | 13.0 |
| Cancer | 835 | 121.8 | 3,676 | 116.0 | 60,603 | 114.3 |
| Cancer of the trachea, bronchus & lung | 171 | 24.4 | 698 | 21.9 | 12,715 | 24.0 |
| Respiratory system diseases | 135 | 18.9 | 628 | 19.6 | 9,726 | 18.3 |
| Chronic lower respiratory disease | 79 | 10.9 | 376 | 11.7 | 6,657 | 12.6 |
| Injuries and poisonings | 204 | 34.4 | 974 | 32.2 | 18,573 | 35.0 |
| Suicide | 81 | 13.6 | 393 | 13.0 | 6,706 | 12.6.0 |
| Motor vehicle accidents | 42 | 7.2 | 236 | 7.9 | 5,014 | 9.5 |
| Other causes | 349 | 54.0 | 1,416 | 45.8 | 26,735 | 50.4 |
| Diabetes mellitus | 51 | 7.2 | 190 | 5.9 | 3,734 | 7.0 |

* 'No.' is the total number of deaths for the 2000-02 period; 'Rate' is an annual rate, based on the 3 year average

‡ See note under 'Data converters and mapping' re calculation of Division totals

The rates used to illustrate the prevalence estimates of chronic disease and injury (Figure 6), measures of self-reported health (Figure 7), and selected risk factors (Figure 8), are shown in Table 13 below.

Table 13: Estimates of chronic disease and associated risk factors, Adelaide Western DGP‡, Adelaide and Australia, 2001

Indirectly age standardised rate per 1,000 population

| Variable | Adelaide Western DGP‡ | Adelaide | Australia |
|--|--------------------------|----------|-----------|
| Chronic disease and injury (Figure 6) | | | |
| Respiratory system diseases | 359.2 | 364.2 | 310.8 |
| Asthma | 138.5 | 141.9 | 118.3 |
| Circulatory system diseases | 176.3 | 173.1 | 171.5 |
| Diabetes type 2 | 25.9 | 24.0 | 23.4 |
| Injury event | 116.9 | 122.8 | 121.2 |
| Mental & behavioural disorders | 113.6 | 106.7 | 97.6 |
| Musculoskeletal system diseases | 341.0 | 339.5 | 326.2 |
| Arthritis | 145.1 | 140.7 | 138.8 |

Acknowledgements

Funding for these profiles was provided by the Population Health Division of the Department of Health and Ageing (DoHA). Assistance, by way of comment on the profiles and assistance in obtaining some datasets, has also been received from the Primary Care Division of the DoHA, the ABS and the ACIR.

Further developments and updates

Subject to agreement and funding, a number of developments could be undertaken:

- Details of hospitalisations potentially avoidable through ambulatory care interventions are currently being prepared and will be forwarded to Divisions (and posted on the PHIDU web site) when they are available. Other enhancements will be considered as appropriate datasets become available.

The profiles could be updated as the data are updated. For example:

- Population estimates, avoidable hospitalisations, immunisation, and GP activity and workforce data – annually;
- Chronic disease estimates – three-yearly;
- Census data – five-yearly.

Any developments would be informed by consultation, including with Divisions.

PHIDU contact details

For general comments, data issues or enquiries re information on the web site, please contact PHIDU:
