ABSTRACT

Bridging the Gap: Recognising the role of community in natural resource management.

This study illustrates the need for purposeful community engagement, the significance of social capital and governance and the need for landholders to participate in the decision-making process regarding natural resource management. It recognises that while the contribution of social science to community based natural resource management has been significant over recent times; consideration of the links between government discourse and the generally less than favourable outcomes of community based natural resource management has been at the most, minimal.

The study consists of a comparative study of two contrasting communities and two natural resource management projects. One study focuses on the role of the regional NRM Board for the South Australian Arid Lands and its endeavour to engage with and assess outback communities in the region to undertake natural resource management. The second study examines the attempts of a government authority to engage with a rural community so as to administer a rehabilitation project of their lands.

By undertaking a comparative study of these two communities this thesis examines (1) the belief that strong networks, trust and transparency are prerequisites for the management of community based projects, (2) community engagement and civic governance as prerequisites for the overall success of natural resource management, and (3) the notions of community and investigates the notion that if communities are to engage and work effectively for the purpose of natural resource management, then they must mean something to the people both inside and outside of those communities.

ACKNOWLEDGEMENTS

Firstly I would like to acknowledge the support and guidance from my principal supervisor Professor Graeme Hugo. Thank you Graeme for your valuable support, critical feedback, patience and kindness you have shown me throughout my candidature. It is with understanding that you continued to support me through the ups and downs of this journey and in doing so, allowed me to regain focus and progress with my research.

I also thank my co-supervisor Dr Dianne Rudd for her ongoing support and humour which helped to make those challenging times a little lighter to bear. I offer thanks to the Staff of the Discipline of Geographical and Environmental Studies at the University of Adelaide for their additional assistance over the years, in particular Dr Louise Mendel and Associate Professor Marcus Lane for their early guidance and supervision.

I offer special thanks to Mark Meyer and Jenny Cleary, two special friends and colleagues who spent many hours discussing with me the merits of community based natural resource management. I also offer my thanks to the following individuals and organisations for their kind assistance with my research.

- The LMRIA dairy farmers who opened their homes to me and allowed me to make known through the research, their experiences of the LMRIA rehabilitation project.
- The SAAL NRM Board who provided me with an opportunity to link my study to a project I was undertaking for DWLBC and the SAAL NRM Board. I would like to extend a special thank you to Russell Flavel (DWLBC) and John Gavin (SAAL NRM Board – Manager).

I would like to thank my sons Steven and Aaron who have shown great faith in me and who have supported me wholeheartedly throughout my candidature. I also thank my son Aaron and Linda Christensen from Scribe Editing and Proofing for taking the time to proof my thesis.

And last but not least I would especially like to thank my husband Graham for all the support and patience he has shown me over the course of my candidature. To say I could not have come so far without his ongoing encouragement would be an understatement.

DECLARATION

This work contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in text.
