

14th May, 1953.

My dear Bernstein,

It is kind of you to send me the typescript of your paper to the Annals of Eugenics. I am sure it would be unreasonable of me to feel any objection to your allusion to my work. I wonder if you have ever seen a later paper in the Annals in which I apply the general method of efficient scores to the fitting of Rhesus factor alleles. In case you have not seen it I enclose a copy, as the symmetry of the differential operators employed may perhaps appeal to you.

Sincerely yours,
