

1st. November 1948.

My dear Henry,

Many thanks for your long letter of Friday's date.

I am indeed very much looking forward to hearing of your work and seeing the data. If you could do no more than set out the number of captures and recaptures, etc., classified as necessary for the purposes in view, with notes on the complex business of re-recaptures as before, I should be glad to work out estimates of population and death rates comparably with the previous year.

I am wondering if you could find time later in the year, after  
terms if necessary, to spend a few nights as my guest in college,  
as I have so much enjoyed you doing before. This would give time  
for me to have come and <sup>to</sup> to have seen my part in the computational  
job.

Sincerely Yours,
