

May 26, 1941

My dear Henry,

This is just a line to say how very much we are looking forward to your coming to visit us next week end.

The mis-mated litter of Judy's, born this morning, has turned out to be unexpectedly interesting, as there are three liver pups. The father is known to have had a liver mother, so presumably Judy was heterozygous for liver, and liver presumably recessive to black.

It may be worth while at this next visit to see that we are properly equipped to handle the Calimorphia larvae.

Yours sincerely,
