

6 November 1934.

My dear Ford,

Yes, I do think the hawk moth sounds promising. I suppose that there will be some difficulty in developing a good breeding technique. You must tell me more about it when you come up on the 22nd.

May I book you for lunch on that day, or will you be lunching on the train?

Alternatively, why not come up Wednesday night, spend the night at Harpenden, visit the Poultry Show with a genetical party on Thursday morning and do the meeting in the afternoon.

Yours sincerely,
