Sir Ronald Fisher, F.R.S.
44 Storeys Way,
Cambridge.

My dear Ron,

How very kind of you to have sent that efficient little ear punch for the mice. It is evidently just the thing and we are, in fact, at this moment reaching the stage at which it is becoming necessary to distinguish individual mice in this fashion. Thank you so much.

At the end of November, Dowdeswell is coming to me and we shall make analysis of our jurtina data obtained in the Isles of Scilly this year. It will be so nice if you can give me a few days, perhaps soon after Christmas, when it would be such a pleasure to see you in Oxford. By that time, Sheppard will have got a number of points together which he will need to consult you over, and we will have this ecological work at a stage we can usefully talk about. So too, by that time, Chatterley should have pushed forward his mouse stocks to a point when it will be of the highest possible value to get your advice upon them, if you would be so good.

With best wishes.

Yours ever,
