Harpenden, Herts.

My dear Gini,

I have just received your paper for the Annals on "The relative importance of hereditary and non-hereditary factors", and this I am very glad to have, as it is the most thorough discussion I have yet seen of the various sources of variation which may be distinguished. I have added it provisionally to Vol. X. No. 1, now being made up. Your second paper I anticipate will be in time for No. 2 of the same volume.

Yours sincerely,
