

2nd. June 1950.

Dear Mr. Hall,

Thank you for your letter. I do hope you will come down often and see something of the people in this department. I have for some years been advocating to the A.R.C. that blood groups especially in cattle should be taken seriously, but I think most of the tentative appointments made must have petered out.

I am sure you will find it a most rewarding subject, though

like all exploratory work it may take some time before one has very much new to report.

Yours sincerely,
