Dear Fisher,

As you know, I have been working on Dominance since 1920. Up to this year I have been obliged to place myself among those who opposed your theory of dominance but am now publishing a paper in J. Sact. in which I believe that I have provided a clear and unequivocal demonstration that the Fisher Effect does actually occur, and that it is the method by which dominance inheritance has been worked in 3 species of New World Coryphæus (hirsutus, pubescens, and taeniæ.) In the other 3 species the Haldane effect has been at work (use of a powerful Normal)

I enclose a copy of my discussion and take this opportunity of expressing my sincere admiration of the clear reasoning which led you to form your theory.

With kind regards

Yours sincerely

J. V. Harland
