

-----

4th February, 1957.

My dear Linder,

This is principally to let you know that the series have arrived safely and have been despatched to their respective ladies. I also had a long letter from Joan, but from Delhi and not from Princeton, where I suppose she may have got to now.

I am sending, under separate cover, a short offprint on a further table I have made for applying Behrens' test with small numbers of degrees of freedom, the analysis of which is fairly manageable when these numbers are both odd. Perhaps this may be a reminder to contact Behrens, or perhaps Lunenborg, on the possibility of getting him to make an appearance in Stockholm.

If I had his address I would send him one of these offprints to begin with.

Many thanks for your care of Joan's gifts.

Sincerely yours,
