
14th August, 1956.

Dear Mr. Lindley,

I have your circular on a proposed panel of speakers, and of course I do not object to your listing my name, though I cannot undertake to attend on any particular occasion. You might note that so far as I am concerned scientific inference is not to be expressed as the making of decisions, and I suppose ¹ statistical inference ² is supposed to be scientific inference achieved by statistical methods.

Sincerely yours,
