

Galton Laboratory.

11th October, 1933.

Dear <sup>Lowndes,</sup>  
~~Laurence.~~

I have been refusing almost everything that looks like work outside my own duties of late, but your letter persuades me to ~~make the effort,~~ and have a short talk to your Association on January 5th.

I hope I may be allowed to be reasonably short as possibly the meeting will like ~~some~~ for ~~discussion.~~

Your second batch of Grass Locusts arrived safely and I have now five cages containing turf out from ~~the garden~~ ~~setup at~~ ~~the~~. I hope to move them here and install suitable breeding cages during the winter, and if only they will stand indoor air I might have broods next year, enough to begin to sort out the Polymorphism.

Yours sincerely
