

10th March, 1958.

My dear Kenneth,

Thanks for your note. I should not take up a mathematical point with Lindley in Heredity. I developed it rather fully for a nice audience at the Kapitza Club here in Cambridge last week, and I believe Frank Yates has covered the only place in Lindley's review where he ventured into the field of genetics with characteristically erroneous results. You do not say whether Yates's letter appears in the May number you mention, or what steps can be taken to restrain Cyril from being sold further pups.

Sincerely yours,
