

21st. January 1947.

My dear Race,

Thanks for your new series of calculations. I will not do any work on them until you give me the word.

I do not know how you recognise $C^W D_e$ as a haploid combination if D is present in the other chromosome.

About the new journal, I had myself hoped that the first number would be about the end of this term, but I think Darlington has now filled the first number, though it has not yet gone to the press.

It is certainly worth while submitting any paper you have ready, though it might well have to wait for the second number.

You might care to note that I am lecturing Mondays and Fridays this term and should not come up to Genetical Committees on those days.

Yours sincerely-
