

2nd September 1946.

My dear Race,

I am sending a request from Ludwik Hirszfeld, whom I met in the States before his return to Poland, and who would dearly like to receive your offprints.

I was able to see Boyd and Diamond, who is quite clear about having the \bar{c} serum, and both Wiener and Levine turned up at my lectures. The former was quiet at the meeting, though a little obstreperous later. Levine seems to be a good chap, though inclined to nurse grievances. If I remember right you already

have a dried sample of $\underline{\delta}$. I should much like to know if it works.

You may care to see the enclosed carbon of the talk I gave at Newhaven as they want to print it in some scientific journal, and you had better know the worst in advance. It was, of course, quite a mixed scientific audience.

Yours sincerely,
