## B-1 Authors' declaration

### DECLARATION OF INDIVIDUAL CONTRIBUTIONS TO THE PUBLISHED OR SUBMITTED MANUSCRIPTS

#### Title:

Spatiotemporal regulation of multiple overlapping sense and novel antisense transcripts at the *Nrgn* and *Camk2n1* gene loci during mouse cerebral corticogenesis.

#### Authors:

King-Hwa Ling (KHL), Chelsee A Hewitt (CAH), Tim Beissbarth (TB), Lavinia Hyde (LH), Pike-See Cheah (PSC), Gordon K Smyth (GKS), Seong-Seng Tan (SST), Christopher N Hahn (CNH), Tim Thomas (TT), Paul Q Thomas (PQT) and Hamish S Scott (HSS).

**Published in: Cerebral Cortex 2010, doi: 10.1093/cercor/bhq141.**

#### Declaration:

KHL performed all the experiments in the manuscript. KHL, CAH, PSC and TT procured the mouse tissues used in the entire study. SST provided the SAGE datasets for analysis. KHL and CAH performed the SAGE validation analysis. TB, LH and GKS designed, performed and supervised the SAGE and genomic clustering analyses. KHL performed whereas GKS supervised the RT-qPCR analyses. KHL and TT performed all the radioactive ISH studies. KHL, PSC, CNH and PQT carried out the expression studies on *Nrgn* and *Camk2n1* transcripts. KHL and PSC performed the RNA FISH analysis. CAH, CNH, TT, PQT and HSS conceived of the study, and participated in its design and coordination. All authors read and approved the final manuscript.

Terms and Conditions	

### STANDARD TERMS AND CONDITIONS FOR REPRODUCTION OF MATERIAL FROM AN OXFORD UNIVERSITY PRESS JOURNAL

1. Use of the material is restricted to the type of use specified in your order details.
2. This permission covers the use of the material in the English language in the following territory: world. If you have requested additional permission to translate this material, the terms and conditions of this reuse will be set out in clause 12.
3. This permission is limited to the particular use authorized in (1) above and does not allow

you to sanction its use elsewhere in any other format other than specified above, nor does it apply to quotations, images, artistic works etc that have been reproduced from other sources which may be part of the material to be used.

4. No alteration, omission or addition is made to the material without our written consent. Permission must be re-cleared with Oxford University Press if/when you decide to reprint.
5. The following credit line appears wherever the material is used: author, title, journal, year, volume, issue number, pagination, by permission of Oxford University Press or the sponsoring society if the journal is a society journal. Where a journal is being published on behalf of a learned society, the details of that society must be included in the credit line.
6. For the reproduction of a full article from an Oxford University Press journal for whatever purpose, the corresponding author of the material concerned should be informed of the proposed use. Contact details for the corresponding authors of all Oxford University Press journal contact can be found alongside either the abstract or full text of the article concerned, accessible from [www.oxfordjournals.org](http://www.oxfordjournals.org) Should there be a problem clearing these rights, please contact [journals.permissions@oxfordjournals.org](mailto:journals.permissions@oxfordjournals.org)
7. If the credit line or acknowledgement in our publication indicates that any of the figures, images or photos was reproduced, drawn or modified from an earlier source it will be necessary for you to clear this permission with the original publisher as well. If this permission has not been obtained, please note that this material cannot be included in your publication/photocopies.
8. While you may exercise the rights licensed immediately upon issuance of the license at the end of the licensing process for the transaction, provided that you have disclosed complete and accurate details of your proposed use, no license is finally effective unless and until full payment is received from you (either by Oxford University Press or by Copyright Clearance Center (CCC)) as provided in CCC's Billing and Payment terms and conditions. If full payment is not received on a timely basis, then any license preliminarily granted shall be deemed automatically revoked and shall be void as if never granted. Further, in the event that you breach any of these terms and conditions or any of CCC's Billing and Payment terms and conditions, the license is automatically revoked and shall be void as if never granted. Use of materials as described in a revoked license, as well as any use of the materials beyond the scope of an unrevoked license, may constitute copyright infringement and Oxford University Press reserves the right to take any and all action to protect its copyright in the materials.
9. This license is personal to you and may not be sublicensed, assigned or transferred by you to any other person without Oxford University Press's written permission.
10. Oxford University Press reserves all rights not specifically granted in the combination of (i) the license details provided by you and accepted in the course of this licensing transaction, (ii) these terms and conditions and (iii) CCC's Billing and Payment terms and conditions.
11. You hereby indemnify and agree to hold harmless Oxford University Press and CCC, and their respective officers, directors, employs and agents, from and against any and all claims arising out of your use of the licensed material other than as specifically authorized pursuant

to this license.

12. Other Terms and Conditions:

v1.4

**Gratis licenses (referencing \$0 in the Total field) are free. Please retain this printable license for your reference. No payment is required.**

**If you would like to pay for this license now, please remit this license along with your payment made payable to "COPYRIGHT CLEARANCE CENTER" otherwise you will be invoiced within 48 hours of the license date. Payment should be in the form of a check or money order referencing your account number and this invoice number RLINK10829244.**

**Once you receive your invoice for this order, you may pay your invoice by credit card. Please follow instructions provided at that time.**

**Make Payment To:**  
Copyright Clearance Center  
Dept 001  
P.O. Box 843006  
Boston, MA 02284-3006

**If you find copyrighted material related to this license will not be used and wish to cancel, please contact us referencing this license number 2485421390870 and noting the reason for cancellation.**

## C-1 Authors' declaration

### DECLARATION OF INDIVIDUAL CONTRIBUTIONS TO THE PUBLISHED OR SUBMITTED MANUSCRIPTS

#### Title:

Sense and overlapping natural antisense transcripts form double stranded RNA to produce a novel endogenous small interfering RNA during brain development

#### Authors:

King-Hwa Ling (KHL), Peter J Brautigan (PJB), Sarah Moore (SM), Rachel Fraser (RF), Pike-See Cheah (PSC), Joy M Raison (JMR), Milena Stankovic (MS), Tasman Daish (TD), Deidre M Mattiske (DMM), Jeffrey Mann (JRM), David L Adelson (DLA), Paul Q Thomas (PQT), Christopher N Hahn (CNH) and Hamish S Scott (HSS).

#### Submitted Manuscript.

#### Declaration:

KHL, PJB and CNH supervised, designed and carried out the overexpression studies and all qPCR analysis. KHL, SM and RF participated in the design and RNA FISH experiment. PQT supervised whereas KHL and PSC performed the LNA-ISH analysis. KHL, JMR and DLA participated in the small RNA sequence analysis, annotations and statistical analysis. KHL and MS performed the immunoblotting analysis. KHL and TD performed the small RNA northern analysis. DMM and JRM cultured and provided the mES cells with DICER1 conditional allele. KHL drafted the manuscript. PQT, CNH and HSS conceived of the study, and participated in its design and coordination. All authors read and approved the final manuscript.

### C-3 Supplementary information 2

**Figure S1 Overexpression analysis of PET6-(unspliced) and PET6-(spliced) in NIH/3T3 cells.**

NIH/3T3 cells were transfected with different constructs to determine the effect of spliced and unspliced variants of PET6 on the *Sox4\_sir3* expression level.

**Figure S2**

**Ingenuity Pathway Analysis and DIANA-microT v3.0 analyses.**

The panel on the left shows the screenshot from the Ingenuity Pathway Analysis (IPA) analysis on associated known neurological disorders with *Sox4\_sir3* downstream target genes as predicted by DIANA-microT 3.0 web-based program. The panel of the right shows the most conserved predicted target sites in *Creb1* and *Itsn1* for *Sox4\_sir3*. Chromosomal position of the predicted target site was based on the mm9 mouse genome (July 2007). Conservation information of these sites was derived from the comparison of various genomes; *bosTau3* = Cow genome (August 2006), *calJac1* = Common marmoset (June 2007), *dasNov1* = Armadillo genome (May 2005), *equCab1* = Horse genome (January 2007), *felCat3* = Cat genome (March 2006), *hg18* = Human genome (May 2006), *loxAfr1* = Elephant genome (May 2005), *ornAna1* = platypus genome (March 2007), *oryCun1* = Rabbit genome (May 2005), *panTro2* = Chimpanzee (March 2006), *rn4* = Rat genome (November 2004), *sorAra1* = Shrew genome (January 2006), *xenTro2* = Frog (*Xenopus tropicalis*) genome (August 2005).

## C-4 Supplementary information 3

**Table S1: List of predicted target sites for *Sox4\_sir3* based on DIANA-microT v3.0 prediction.**

## **APPENDIX D**

### ***Additional information for Chapter 6.***

D-1. Authors' declaration.

D-2. Additional files 1-12 in an electronic form in a compact disc (CD).

Original files are accessible at

<http://www.biomedcentral.com/1471-2164/12/176/additional/>.

D-3. Additional file 13. Original file is accessible at

<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s13.xls>.

D-4. Additional file 14. Original file is accessible at

<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s14.doc>.

## D-1 Authors' declaration

### DECLARATION OF INDIVIDUAL CONTRIBUTIONS TO THE PUBLISHED OR SUBMITTED MANUSCRIPTS

#### Title:

Deep sequencing analysis reveals novel microRNAs in the developing mouse brain

#### Authors:

King-Hwa Ling (KHL), Peter J Brautigan (PJB), Christopher N Hahn (CNH), Tasman Daish (TD), John R Rayner (JRR), Pike-See Cheah (PSC), Joy M Raison (JMR), Sandra Piltz (SP), Jeffrey R Mann (JRM), Deidre M Mattiske (DMM), Paul Q Thomas (PQT), David L Adelson (DLA) and Hamish S Scott (HSS).

#### Submitted Manuscript.

#### Declaration:

KHL, JRR, JMR and DLA participated in the small RNA sequence analysis and annotations. KHL, PJB and CNH supervised, designed and carried out the qPCR analysis. KHL and TD performed the small RNA northern analysis. PQT supervised whereas KHL and PSC performed the LNA-ISH analysis. SP performed the procedures for superovulation and mating of mice, cultured the morulae and provided the blastocysts for the expression analysis. DMM and JRM cultured and provided the mES cells with DICER1 conditional allele. KHL drafted the manuscript. CNH, PQT, DLA and HSS conceived of the study, and participated in its design and coordination. All authors read and approved the final manuscript.

#### NOTE:

Statements of authorship appear in the print copy of the thesis held in the University of Adelaide Library.

## D-2 Additional files 1-12

Additional files 1-12 are provided in the DVD presented at the back of the thesis. Following are the description for each file:

1. Additional file 1 - List of 413,494 unique tags. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s1.zip>
2. Additional file 2 - List of unique tags mapped to repetitive elements and ncRNAs based on the 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s2.txt>
3. Additional file 3 - List of unique tags mapped to repetitive elements and ncRNAs based on the 5' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s3.txt>
4. Additional file 4 - List of unique tags mapped to miRNAs, pre-miRNAs or miRNA-star based on 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s4.txt>
5. Additional file 5: List of unique tags mapped to RefSeq sequences based on 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s5.txt>
6. Additional file 6 - List of unique tags mapped to RefSeq sequences based on 5' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s6.txt>
7. Additional file 7 - List of unique tags mapped to redundant mouse ESTs based on 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s7.txt>
8. Additional file 8 - List of unique tags mapped to redundant mouse ESTs based on 5' end sequences. Original file is accessible at

<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s8.txt>

9. Additional file 9 - List of unique tags mapped to a single locus in the mouse genome based on 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s9.txt>
10. Additional file 10 - List of unique tags mapped to a single locus in the mouse genome based on 5' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s10.txt>)
11. Additional file 11 - List of unique tags mapped to multiple loci in the mouse genome based on 3' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s11.txt>
12. Additional file 12 - List of unique tags mapped to multiple loci in the mouse genome based on 5' end sequences. Original file is accessible at  
<http://www.biomedcentral.com/content/supplementary/1471-2164-12-176-s12.txt>

## D-3 Additional file 13

The figure continues on next page...

**Figure S2** Non-validated predicted pre- and mature miRNAs for mm\_br\_e15\_276138 (A), mm\_br\_e15\_331608 (B), mm\_br\_e15\_255873 (C) and mm\_br\_e15\_363469. These sequences were rejected due to either one or combination of the following features: a large internal loop (A), branching stemloops (B) or an oversize precursor structure (A-D). Northern blot analysis for all predicted pre- and mature miRNAs did not validate the existence of these putative miRNAs.

## **Statistical information and analysis results of *miR-3099* expression**

### **Experiment (A): Expression of *miR-3099* in mouse embryonic stem cells:**

**Purpose:** To determine if DICER1 enzyme activity effects the expression levels of *miR-3099* in embryonic stem cells.

**Experimental Treatments:** Embryonic stem cells with (wild type) and without (knock out) DICER1 enzyme activity.

**Statistical methods:** One way Analysis of Variance.

**Results:** Based on three replicates in each group, there was a significant difference in the expression levels in the stem cells with and without DICER1 activity ( $P<0.01$ ). Wild type cells had a higher expression level ( $-2.86 \pm 0.52$ ) than the knock out cells ( $-8.16 \pm 0.52$ ).

### **Experiment (B): Expression of *miR-3099* in embryogenesis:**

**Purpose:** To determine if the expression levels of *miR-3099* vary throughout embryogenesis.

**Experimental Treatments:** Embryonic day 3 blastocysts, and day 7 embryos.

**Statistical methods:** One way Analysis of Variance.

**Results:** Based on three replicates in each group, there was a significant difference in the expression levels in the blastocysts and day 7 embryos ( $P<0.001$ ). The blastocysts had a higher expression level ( $-3.45 \pm 0.12$ ) than 7-day old embryos ( $-6.69 \pm 0.12$ ).

### **Experiment (C): Expression of *miR-3099* in whole brains at different developmental stages:**

**Purpose:** To determine if there were differences in the whole brain expression levels of *miR-3099* in the brain during development.

**Experimental Treatments:** Whole brains of mice were taken at embryonic age 11.5, 13.5, 15.5 and 17.5 days, and postnatal days 1.5 and 150.

**Statistical Methods:** One way Analysis of Variance.

**Results:** There was a significant difference in the *miR-3099* expression levels in whole brains obtained from different ages ( $P=0.02$ ). Whole brains at embryonic day 11.5 had significantly less expression than at any other age. There were no significant differences among the expression levels at the other ages. The LSDs are: 1) 1.31 for comparing postnatal Day 1.5 with any other age, and 1.44 for comparing any other ages. The means and standard errors for the whole brain expression at each age are given in the table below.

AGE	NUMBER OF REPLICATES	MEAN	SE
Embryonic Day 11.5	2	-1.97	0.43
Embryonic Day 13.5	2	0.30	0.43
Embryonic Day 15.5	2	-0.39	0.43
Embryonic Day 17.5	2	0.27	0.43
Postnatal Day 1.5	3	0.86	0.35
Postnatal Day 150	2	-0.12	0.43

## **Experiment (D): Expression in different brain regions of mature mice:**

**Purpose:** To determine if there are differences in expression levels of *miR-3099* among the different brain regions in adult mice.

**Experimental Treatments:** The following brain regions were excised from adult mice (postanatal day 150): cerebellum; olfactory bulb; cerebrum; medulla; thalamus; and hippocampus.

**Statistical methods:** One way Analysis of Variance.

**Results:** There was no significant difference in the expression levels among the brain regions ( $P=0.45$ ). The mean log<sub>2</sub> normalized expression level is given in the following table for each brain region. For each region there are 2 replicates, and the standard error is 0.79.

BRAIN REGION	MEAN
Cerebellum	-3.28
Olfactory bulb	-2.95
Cerebrum	-2.56
Medulla	-1.62
Thalamus	-1.44
Hippocampus	-1.38

## **Experiment (E): Expression in different organs in adult mice:**

**Purpose:** To determine if there are differences in expression levels of *miR-3099* among the different organs in adult mice.

**Experimental Treatments:** The following organs were taken from adult mice (postnatal day 150): spleen; stomach; liver; skeletal muscle; skin; ovary; testes; brain; kidney; small intestine; heart; large intestine; thymus and pancreas.

**Statistical methods:** One way Analysis of Variance.

**Results:** There was a significant difference in expression levels among the organs ( $P<0.001$ ). The mean log<sub>2</sub> normalized expression level is given in the following table for each organ.

ORGAN	MEAN	GROUP
Spleen	-4.88	A
Stomach	-4.33	A
Liver	-3.57	B
Skeletal muscle	-2.69	A
Skin	-1.77	B
Ovary	-1.21	B
Testes	-0.13	B
Brain	-0.12	B
Kidney	-0.01	A
Small intestine	0.32	B
Heart	1.48	A
Large intestine	1.98	B
Thymus	2.69	B
Pancreas	7.03	B

Group A organs have three replicates, and their standard error is 0.88, whereas group B organs have two replicates, and their standard error is 1.08. The least significant differences (LSDs) are: 2.61 when comparing two organs from group A; 3.19 when comparing two organs from group B; and 2.91 when comparing a group A organ with a group B organ.

### **Experiment (F): Expression in different cell stages in P19 cells:**

**Purpose:** To determine if there is a difference in expression levels of *miR-3099* between P19 neurodifferentiating and proliferating cells.

**Experimental Treatments:** P19 cells were treated to differentiate or proliferate.

**Statistical methods:** One way Analysis of Variance.

**Results:** There was a significant difference in the expression levels in the different cell types ( $P=0.04$ ). Differentiating cells had a higher expression level than the proliferating cells. The mean log<sub>2</sub> normalized expression level is given in the following table for each cell stage.

CELL TYPE	NUMBER OF REPLICATES	MEAN	SE
Differentiating	3	-2.72	0.21
Proliferating	2	-3.85	0.26
