

Global Distribution Models for Whale Sharks

(Assessing Occurrence Trends of Highly Migratory Marine Species)

Ana Micaela Martins Sequeira

(M.Sc. Modelling the Marine Environment)

A thesis submitted to the

Australia

in fulfilment of the requirements for the degree of

Doctor of Philosophy

February 2013

(Quando eu era pequenina...)

- A minha mãe ensinou-me como explicar sempre o que eu queria.
- O meu pai ensinou-me que não podemos ter sempre o que queremos no momento em que queremos.

Completar o meu doutoramento teria sido impossível se eu não tivesse aprendido estas duas lições.

Esta tese é dedicada aos meus pais.

Translation:

(When I was a little girl...)

- *My mum taught me how to always explain what I wanted.*
- *My father taught me that we cannot always have what we want, when we want it.*

Completing my Ph.D. would never have been possible without these two lessons

I dedicate my Ph.D. to my parents.

APPENDIX C

Table C1: Treatment given to each explanatory variable (standardization) used to
obtained the spatial predictor (*SpatialP*) (Sequeira *et al.*, 2012) for the first
step of our temporal models; *SST* – sea surface temperature; *Chl a* –
chlorophyll *a*.237

APPENDIX D

Table D1: BIOMOD modelling summary for the runs with the global dataset.....244
Table D2: Model selection in BIOMOD.....245
Table D3: Ranking of variable importance for the global model considered within the
BIOMOD platform.245

SUMMARY

The processes driving distribution and abundance patterns of highly migratory marine species, such as filter-feeding sharks, remain largely unexplained. The whale shark (*Rhincodon typus* Smith 1828) is a filter-feeding chondrichthyan that can reach > 18 m in total length, making it the largest extant fish species. Its geographic range has been defined within all tropical and warm temperate waters around the globe. However, even though mitochondrial and microsatellite DNA studies have revealed low genetic differentiation among the three major ocean basins, most studies of the species are focussed on the scale of single aggregations. Our understanding of the species' ecology is therefore based on only a small proportion of its life stages, such that we cannot yet adequately explain its biology and movement patterns (Chapter I). I present a worldwide conceptual model of possible whale shark migration routes, while suggesting a novel perspective for quantifying the species' behaviour and ecology. This model can be used to trim the hypotheses related to whale shark movements and aggregation timings, thereby isolating possible mating and breeding areas that are currently unknown (Chapter II). In the next chapter, I quantify the seasonal suitable habitat availability in the Indian Ocean (ocean basin-scale study) by applying generalised linear, spatial mixed-effects and maximum entropy models to produce maps of whale shark habitat suitability (Chapter III). I then assess the inter-annual variation in known whale shark occurrences to unearth temporal trends in a large area of the Indian Ocean. The results from the Indian Ocean suggest both temporal and spatial variability in the whale sharks occurrence (Chapter IV). Therefore, I applied the same analysis to the Atlantic and Pacific Oceans using similar broad-scale datasets. While the results for the Pacific Ocean were inconclusive with respect to temporal

trends, in the Atlantic Ocean I found preliminary evidence for a cyclic regularity in whale shark occurrence (Chapter V). In Chapter VI, I build a model to predict global whale shark habitat suitability for the present, as well as within a climate change scenario for 2070. Finally, Chapter VII provides a general discussion of the work developed within this thesis and presents ideas for future research.

STATEMENT OF ORIGINALITY

This work contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text.

I give consent to this copy of my thesis when deposited in the University Library, being made available for loan and photocopying, subject to the provisions of the Copyright Act 1968.

The author acknowledges that copyright of published works contained within this thesis (as listed below*) resides with the copyright holder(s) of those works.

I also give permission for the digital version of my thesis to be made available on the web, via the University's digital research repository, the Library catalogue, and also through web search engines, unless permission has been granted by the University to restrict access for a period of time.

ACKNOWLEDGMENTS

Thanks to the *Fundação para a Ciência e Tecnologia* (Portuguese Foundation for Science and Technology) and European Social Funds (Ph.D. scholarship SFRH/BD/47465/2008), and to the University of Adelaide for funding my Ph.D. project. Also, thanks to the Australian Institute of Marine Science, Flying Sharks, Russel and Baudinette Travel Scholarship, and Society for Conservation Biology for additional funding / support.

I am thankful to my supervisors for the opportunity to undertake this project and for their support:

- Corey Bradshaw, who (in first place) believed in me and in my capacity to undertake this project, and fully supported me throughout (including overcoming my *portuguenglish* writing) always in a positive and encouraging way
- Mark Meekan, who made sure I had enough time to think, re-think and think again, and then finally be certain, that I wanted to do this Ph.D., and only then allowed me the opportunity to live unique “whale shark moments”
- Camille Mellin, who joined in as my Ph.D. supervisor after my arrival to Adelaide, and turned out to be my research “pillar” always with supportive and friendly advice.

Thanks to all the fishery-vessel owners (pole and line and purse-seiners) for access to log-book data used throughout my Ph.D. and to the Indian Ocean Tuna Commission and *Institut de Recherche pour le Développement* (France), the Azores Fisheries Observer Programme and the University of the Azores (Portugal), the Inter-American Tropical Tuna Commission and the Secretariat of the Pacific Community – in particular, A. Fonteneau, M. Herrera, R. Pianet, P. Afonso, M. A. Gaspar, M. Hall and P. Williams for extraction of the data. Also to D. Rowat for initial assistance with access to data.

Thanks to everybody involved in the whale shark field trips (2009 – 2012) for their help, partaking of knowledge and sharing of wonderful “whale shark moments”. Special thanks to: Iain Field, Michelle Thums, Kim Brooks and Terry Maxwell.

Thanks to the staff members from all the institutions involved, who in one way or another contributed and helped me throughout my Ph.D. In particular: Michelle Picard (for friendly support), Janelle Palmer, John Jennings, Louise Gillis, Maria Albanese and Lucy Zuzolo (from the University of Adelaide); Shona Pettigrew, Sharon Haswell, Susan Berry, Gheslaine Holmes and Mary Bell (from the Australian Institute of Marine Sciences), and Nuno Lima (from *Fundação para a Ciência e Tecnologia*).

Thanks to the Global Ecology Lab group for help and support. A special thanks to: Steven Delean (for helpful assistance with statistics), Salvador Herrando-Pérez (my *mate* in the lab), Lochran Trail, Nerissa Haby and Stephen Gregory.

While in Adelaide, my friends (Nadja Klafke, Suzanne McAllister, Kym Abrams, Esther Breed, Maria Marklund and Julian Felton), the King family (Gordon, Adrienne, Nicholas, Karen, Michael, Simone and Kyra – now part of my family as well) and the *South Coast Wing Chun Kung Fu* crew, kept the experience “human” ;-) and provided friendly and happy moments.

From the other side of the planet (where my reality makes sense...) there is not enough space to thank all: my family and beloved friends!

But I cannot avert mentioning here:

- My parents: Lurdes and Artur - who take care of me so well (even from afar)
- My sisters: Sónia and Suzete - their believe in me gives me strength
- My friends: Sofia, Célia and Inês - they keep me alive instead of just living

Thanks for being here, there... every time everywhere!

João Nuno (R.I.P.) thanks for dreaming the Australian dream with me - it became REAL!

Thanks for everything ♥Gary♥ (especially, for holding my hand).

As requested by the major funding organisation, here I include their logos:
