Riiki = N Timone

Kaingin-Samoa = N Tetano

N Temau = Teneinei

Teatibu = N Teakea

Nareau

see here

Teatibu was killed by his son Nareau, who threw away his left eye to become the Moon; and then threw his right eye away to become the Sun. He ground up his body into pieces which became the Stars.

SOME OF

And he ~~then~~ again took his bones and threw pieces to the north and to the south, and these parts of his body became islands.

From his body grew the tree Kaintikuaba; many people lived in it, but Moaine was the chief of the eastern branch. When the tree began to burn she ~~flew~~ flew away, but when flying north over the ocean she was made pregnant by the breeze and ~~was~~ a whirlwind.

She first landed on Beru and stayed at Tanga-upua. But as she did not give birth there she flew north again and settled above the Neihimane. She did not give birth there either so she settled on the Ngea trees. But once again she did not give birth so she made a nest among the Tarai, where she finally had her child, whom she called Ten Tarai.
